The Pragmatics And Semiotics Of Standard Languages:

The Pragmatics and Semiotics of Standard Languages Albert Sweet, 1990-10-01 Sweet describes the pragmatic foundations of standard logic and applies these foundations to the task of developing a theory of intended models as an extension of standard model theory in which the relevant intending is represented pragmatically. Methods of formal logic are used to investigate the structure of the relation between language and the world. The truism which holds that this relation includes the speaker as well as the object spoken about is formally explicated and applied to the problem of illuminating one of the deepest phenomena in standard model theory: the existence of non isomorphic models of complete theories. To this end it is shown that standard logic admits pragmatic foundations upon which a theory of intended models can be built as an extension of standard model theory. The relevant intending is represented by the very forms of verbal behavior which determine the grammatical and logical structure of the sentences whose referential meaning is in question. The uniqueness properties of the class of intended models may then be described. The first section of the book states the immediate goal of standard pragmatics as that of recovering the algebraic structure first order logic by means of a purely pragmatic construction. The second section, the major portion of the work, then provides the foundation for a semiotic theory of intended models and referential meaning. The theory is then applied to the problem of referential indeterminacy which has been associated with the phenomenon of scientific revolutions. The theory is also applied to the problem of the apparent synonymy of observationally equivalent theories. Sweet concludes that such theories are not referentially synonymous in any natural sense which is analogous to the paradigm sense in which theories of alternative scales of measurement are referentially synonymous. A novel feature of this book is the formal explication of the idea that the factors pragmatical in nature which distinguish the actual meaning of a sentence from among its possible meanings whose range is defined by the manner in which the sentence is parsed determine that very parsing. Applicability to natural language of the model theoretic semantics thereby obtained is made possible by another feature of the book: the development of a theory of locally standard grammar which provides the foundation for representing the structure of natural language as that of standard first order logic in a local as distinguished from a global sense. This book is intended for scholars in logic, semiotics and the philosophies of language and of science. Those concerned specifically with such philosophers as Peirce, Martin and Davidson will also find the study valuable. *The Social Thought of Ortega Y Gasset* John T. Explaining Mantras Robert A. Yelle, 2004-03-01 Explaining Mantras explores the intersection of poetry and magic in the mantras or verbal formulas of Hindu Tantra The author reveals how mantras work in light of both the esoteric tradition of Tantra and a general semiotic theory of ritual Mantras mimic the act of sexual reproduction and the cosmic cycle of creation and destruction A mantra that imitates creation is believed to be more creative and effective in producing a real world result Drawing from linguistics semiotics anthropology and philosophy as well as the history of religions the author argues that mantras and other ritual discourses use rhetorical devices including imitation to construct the persuasive illusion of a natural language one with a direct and immediate connection to reality This vital relation between poetry and ritual has been neglected in many current theories of religion Explaining Mantras combines the study of ancient Tantric rituals with the latest theories in the human sciences and will be of interest to a broad range of readers

The Relation of Theoretical and Applied Linguistics Olga Miseska Tomic, Roger W. Shuy, 2012-12-06 The relationship of theoretical and applied linguistics has lately prompted numerous debates This volume originated at one of them The essence of most of the chapters of all of them except Fraser's and Davies's was actually presented at the Round Table on The Relationships of Theoretical and Applied Linguistics organized during the 7th World Congress of Applied Linguistics held in Brussels in August 1984 Individually and collectively the chapters assembled here offer support to the idea that applied linguistics should not be juxtaposed to theoretical linguistics it is a field of research with theoretical as well as applied aspects Written by different authors from a wide variety of different countries the chapters may at times express

views that are not totally consistent Nevertheless we believe that the variability of viewpoints counts among the merits rather than the defaults of this internationally written and edited volume It is our hope that it will prove stimulating to linguists and practitioners in related fields and instructive to students We wish to express our thanks to Albert Valdman for the interest he has shown in the volume and to record our appreciation to our editors in particular Eliot Werner and Declan Scully for their tolerance and patience
