

Важнейшим из этапов формирования геологической истории Земли является формирование и развитие земной коры. В настоящее время накоплено много фактов, свидетельствующих о том, что в ранние периоды истории Земли существовали обширные области, занятые жидкой магмой. В процессе остывания и кристаллизации магмы происходило образование различных пород, в том числе и кристаллических пород. Эти породы, в свою очередь, подвергались метаморфизму, что привело к образованию метакристаллических пород. Таким образом, формирование земной коры является сложным процессом, который продолжается и в настоящее время.
