Surveys in Combinatorics, 1991 A. D. Keedwell, 1991 Professor of Geometry N J Hitchin, 2014-05-18 This volume contains the invited papers presented at the British Combinatorial Conference held at the University of Surrey in July 1991 **Surveys in Combinatorics ...** British Combinatorial Conference, 1991 **Surveys in combinatorics. Invited papers ; 1991**, 1991 **Combinatorial and Geometric Group Theory, Edinburgh 1993** Andrew J. Duncan, N. D. Gilbert, James Howie, 1995 The ICMS Workshop on Geometric and Combinatorial Methods in Group Theory held at Heriot Watt University in 1993 brought together some of the leading research workers in the subject Some of the survey articles and contributed papers presented at the meeting are collected in this volume The former cover a number of areas of current interest and include papers by S M Gersten R I Grigorchuk P H Kropholler A Lubotzky A A Razborov and E Zelmanov The contributed articles all refereed range over a wide number of topics in combinatorial and geometric group theory and related topics The volume represents a summary of the state of knowledge of the field and as such will be indispensable to all research workers in the area Second Order Partial Differential Equations in Hilbert Spaces Giuseppe Da Prato, Jerzy Zabczyk, 2002-07-25 Second order linear parabolic and elliptic equations arise frequently in mathematics and other disciplines For example parabolic equations are to be found in statistical mechanics and solid state theory their infinite dimensional counterparts are important in fluid mechanics mathematical finance and population biology whereas nonlinear parabolic equations arise in control theory Here the authors present a state of the art treatment of the subject from a new perspective The main tools used are probability measures in Hilbert and Banach spaces and stochastic evolution equations There is then a discussion of how the results in the book can be applied to control theory This area is developing very rapidly and there are numerous notes and references that point the reader to more specialised results not covered in the book Coverage of some essential background material will help make the book self contained and increase its appeal to those entering the subject *An Introduction to Noncommutative Differential Geometry and Its Physical Applications* J. Madore, 1999-06-24 A thoroughly revised introduction to non commutative geometry **Invariant Potential Theory in the Unit Ball of C^n** Manfred Stoll, 1994-05-12 This monograph provides an introduction and a survey of recent results in potential theory with respect to the Laplace Beltrami operator D in several complex variables with special emphasis on the unit ball in C^n Topics covered include Poisson Szeg integrals on the ball the Green's function for D and the Riesz decomposition theorem for invariant subharmonic functions The extension to the ball of the classical Fatou theorem on non tangible limits of Poisson integrals and Littlewood's theorem on the existence of radial limits of subharmonic functions are covered in detail The monograph also contains recent results on admissible and tangential boundary limits of Green potentials and L_p inequalities for the invariant gradient of Green potentials Applications of some of the results to H_p spaces and weighted Bergman and Dirichlet spaces of invariant harmonic functions are included

The notes are self contained and should be accessible to anyone with some basic knowledge of several complex variables

Singularities of Plane Curves Eduardo Casas-Alvero,2000-08-31 Comprehensive and self contained exposition of singularities of plane curves including new previously unpublished results **Quantum Groups and Lie Theory** Andrew Pressley,2002-01-17 Since its genesis in the early 1980s the subject of quantum groups has grown rapidly By the late 1990s most of the foundational issues had been resolved and many of the outstanding problems clearly formulated To take stock and to discuss the most fruitful directions for future research many of the world s leading figures in this area met at the Durham Symposium on Quantum Groups in the summer of 1999 and this volume provides an excellent overview of the material presented there It includes important surveys of both cyclotomic Hecke algebras and the dynamical Yang Baxter equation Plus contributions which treat the construction and classification of quantum groups or the associated solutions of the quantum Yang Baxter equation The representation theory of quantum groups is discussed as is the function algebra approach to quantum groups and there is a new look at the origins of quantum groups in the theory of integrable systems
