Surveys In Combinatorics 2003:

Surveys in Combinatorics 2003 C. D. Wensley, 2003-07-24 The British Combinatorial Conference is held every two years and is a key event for mathematicians worldwide working in combinatorics In June 2003 the conference was held at the University of Wales Bangor The papers contained here are surveys contributed by the invited speakers and are of the high quality that befits the event There is also a tribute to Bill Tutte who had a long standing association with the BCC The papers cover topics currently attracting significant research interest as well as some less traditional areas such as the combinatorics of protecting digital content They will form an excellent resource for established researchers as well as graduate students who will find much here to inspire future work

The Bloch-Kato Conjecture for the Riemann Zeta Function John Coates, A. Raghuram, Anupam Saikia, R. Sujatha, 2015-03-19 There are still many arithmetic mysteries surrounding the values of the Riemann zeta function at the odd positive integers greater than one For example the matter of their irrationality let alone transcendence remains largely unknown However by extending ideas of Garland Borel proved that these values are related to the higher K theory of the ring of integers Shortly afterwards Bloch and Kato proposed a Tamagawa number type conjecture for these values and showed that it would follow from a result in motivic cohomology which was unknown at the time This vital result from motivic cohomology was subsequently proven by Huber Kings and Wildeshaus Bringing together key results from K theory motivic cohomology and Iwasawa theory this book is the first to give a complete proof accessible to graduate students of the Bloch Kato conjecture for odd positive integers It includes a new account of the results from motivic cohomology by Huber and Kings
