Sustainable Agriculture And Resistance:

Sustainable Agriculture and Resistance Fernando Funes, 2002 This is a story of resistance against all odds of Cuba's remarkable recovery from a food crisis brought on by the collapse of trade relations with the former socialist bloc and the tightening of the U S embargo Unable to import either food or the farm chemicals and machines needed to grow it via conventional agriculture Cuba turned inward toward self reliance Sustainable agriculture organic farming urban gardens smaller farms animal traction and biological pest control are part of the successful paradigm shift underway in the Cuban countryside In this book Cuban authors offer details for the first time in English of these remarkable achievements which may serve as guideposts toward healthier more environmentally friendly and self reliant farming in countries both North and South Publisher's description

Sustainable Agriculture Eric Lichtfouse, Mireille Navarrete, Philippe Debaeke, Souchère Véronique, Caroline Alberola, 2009-11-11 Sustainability rests on the principle that we must meet the needs of the present without compromising the ability of future generations to meet their own needs Starving people in poor nations obesity in rich nations increasing food prices on going climate changes increasing fuel and transportation costs flaws of the global market worldwide pesticide pollution pest adaptation and resistance loss of soil fertility and organic carbon soil erosion decreasing biodiversity desertification and so on Despite unprecedented advances in sciences allowing to visit planets and disclose subatomic particles serious terrestrial issues about food show clearly that conventional agriculture is not suited any longer to feed humans and to preserve ecosystems Sustainable agriculture is an alternative for solving fundamental and applied issues related to food production in an ecological way While conventional agriculture is driven almost solely by productivity and profit sustainable agriculture integrates biological chemical physical ecological economic and social sciences in a comprehensive way to develop new farming practices that are safe and do not degrade our environment In that respect sustainable agriculture is not a classical and narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources As most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world This book gathers review articles that analyze current agricultural issues and knowledge then propose alternative solutions It will therefore help all scientists decision makers professors farmers and politicians who wish to build a safe agriculture energy and food system for future generations

Sustainable Agriculture Reviews 46 Harsh Panwar, Chetan Sharma, Eric Lichtfouse, 2020-09-29 According to the World Health Organization antimicrobial resistance is a major threat to global health because the number of alternative antibiotics is very limited Antimicrobial resistance is a slow evolutionary process that has been accelerated by human activities in health environment and agriculture sectors Due to their wide application antibiotics and their residues have been found in almost all food products and natural ecosystems This book reviews the drivers impact and mitigation of antimicrobial resistance with focus on methods and targets

Sustainable Agriculture and Food Security

in an Era of Oil Scarcity Julia Wright, 2012-05-16 Based on original research by the author who had unique access to the rural areas of Cuba this book provides the only example of how a country's agriculture and food supply have coped with conditions of post peak oil Agriculture and Food in Crisis Fred Magdoff, Brian Tokar, 2010-11-01 The failures of free market capitalism are perhaps nowhere more evident than in the production and distribution of food Although modern human societies have attained unprecedented levels of wealth a significant amount of the world's population continues to suffer from hunger or food insecurity on a daily basis In *Agriculture and Food in Crisis* Fred Magdoff and Brian Tokar have assembled an exceptional collection of scholars from around the world to explore this frightening long term trend in food production While approaching the issue from many angles the contributors to this volume share a focus on investigating how agricultural production is shaped by a system that is oriented around the creation of profit above all else with food as nothing but an afterthought As the authors make clear it is technically possible to feed the world's people but it is not possible to do so as long as capitalism exists Toward that end they examine what can be and is being done to create a human centered and ecologically sound system of food production from sustainable agriculture and organic farming on a large scale to movements for radical land reform and national food sovereignty This book will serve as an indispensable guide to the years ahead in which world politics will no doubt come to be increasingly understood as food politics Seasons of Resistance Carmen G. Gonzalez, 2009 Beginning in the mid 1990s Cuba embarked upon a transformation of the agricultural sector that has been hailed by some observers as a model of socially equitable and ecologically sustainable agriculture Cuba shifted from an export oriented chemical intensive agricultural development strategy to one that promoted organic agriculture and encouraged production for the domestic market This article places Cuba's agricultural reforms in historical context by examining the evolution of Cuban agriculture from the colonial period until the present through the lens of food security and ecological sustainability The article argues that Cuba for most of its history was food insecure and ecologically compromised as a consequence of its dependence on one agricultural commodity sugar to generate the bulk of foreign exchange revenues its reliance on imports to satisfy domestic food needs its dependence on one primary trading partner initially Spain subsequently the United States and the Soviet Union and its adoption of capital intensive chemical dependent agricultural production techniques When the collapse of the socialist trading bloc in 1990 plunged the Cuba economy into a state of crisis the Cuban government implemented a series of reforms that diversified Cuba's economic base diversified the range of crops cultivated prioritized domestic food production and promoted organic and semi organic farming techniques The article concludes that these reforms enhanced food security and ecological sustainability but questions whether they will survive the lifting of the U S economic embargo and the reintegration of Cuba into global trade and financial institutions CRISPR Technology for Combating Plant Pests and Pathogens Jen-Tsung Chen, 2025-09-15 CRISPR Technology for Combating Plant Pests and Pathogens improves the understanding of CRISPR mediated crop protection presenting innovative strategies for
