Patterns of bryophyte recording in Britain and Ireland since the 2014 *Atlas*

Sam Amy and Oli Pescott summarise over 0.7 million records added to the BBS database since the *Atlas*

The BBS database comprises all records of bryophytes from Britain and Ireland submitted by members, and is maintained by the Biological Records Centre (BRC) at UKCEH Wallingford. These data are used to produce distribution maps, checklists, atlases and conservation assessments, and can be queried to give information on any subset of interest, whether taxonomic, geographic, temporal, or any combination of these. The data are, of course, also used for various ecological research projects, and shared with the wider ecological community through the UK National Biodiversity Network Atlas (<https://nbnatlas.org/>) and the Irish National Biodiversity Data Centre Maps website

(<https://maps.biodiversityireland.ie/>). Both of these structures are also 'nodes' of the Global Biodiversity Information Facility (www.gbif.org), meaning that BBS data are available to all users of that portal as well.

The *Atlas of British and Irish Bryophytes* was published in 2014 (Blockeel *et al.*, 2014), and this note is intended to summarise data additions since then. Many data were processed and loaded to the database in 2020–2021 in advance of the new *Cerato Catalogue* (Blockeel *et al.*, 2021), and the recent addition of a new botanical data assistant (Sam Amy) to the BRC staff has enabled us to keep up-to-date with incoming records. Since the *Atlas*, we have had over 737,000 records submitted to the database, bringing

Northwest Forest Plan United States. Congress. Senate. Committee on Energy and Natural Resources. Subcommittee on Forests and Public Land Management, 2000 Conservation of Rare or Little-Known Species Martin G. Raphael, Randy Molina, 2013-03-19 Some ecosystem management plans established by state and federal agencies have begun to shift their focus away from single species conservation to a broader goal of protecting a wide range of flora and fauna including species whose numbers are scarce or about which there is little scientific understanding To date these efforts have proved extremely costly and complex to implement Are there alternative approaches to protecting rare or little known species that can be more effective and less burdensome than current efforts Conservation of Rare or Little Known Species represents the first comprehensive scientific evaluation of approaches and management options for protecting rare or little known terrestrial species The book brings together leading ecologists biologists botanists economists and sociologists to classify approaches summarize their theoretical and conceptual foundations evaluate their efficacy and review how each has been used Contributors consider combinations of species and systems approaches for overall effectiveness in meeting conservation and ecosystem sustainability goals They discuss the biological legal sociological political administrative and economic dimensions by which conservation strategies can be gauged in an effort to help managers determine which strategy or combination of strategies is most likely to meet their needs Contributors also discuss practical considerations of implementing various strategies Conservation of Rare or Little Known Species gives land managers access to a diverse literature and provides them with the basic information they need to select approaches that best suit their conservation objectives and ecological context It is an important new work for anyone involved with developing land management or conservation plans *A Year in Review for the Pacific Northwest Research Station* Pacific Northwest Research Station (Portland, Or.), 1997

Environmental Law and the Values of Nature Richard J. Finkmoore, 2010 This casebook provides students in introductory environmental law courses with the broad understanding necessary to practice in the field and a firm foundation for subsequent course work in specialized environmental subjects In addition to covering many standard topics such as NEPA and the Clean Water Act this book emphasizes natural resources law including water allocation species conservation and federal public land management Unlike many casebooks it also examines energy issues climate change sustainable development and the environmental movement This distinctive book uses the historical development of environmental and natural resources law as a helpful context within which to understand the modern law in these fields It also incorporates eight engaging case studies showing the application of environmental law in the real world The volume includes significant excerpts from the major environmental statutes so that it is not necessary to assign a statutory supplement Thought provoking readings from for example Lewis and Clark Marsh Muir Udall Wilkinson Sax Lazarus Rodgers Shabecoff Hays E O Wilson Leopold Reisner and Speth enhance student insight One theme of the casebook which promotes enthusiastic class

discussion is that the environment possesses a wide range of values or characteristics of worth and that an appreciation of these values illuminates the objectives strengths and limitations of contemporary law **The Bryophytes of Illinois** Kevin S. Cummings,1984 **Antarctic Journal of the United States** ,1993 **Bibliography of Agriculture with Subject Index** ,1993-10 **Government Reports Announcements & Index** ,1984-06 Conservation and Management of Native Plants and Fungi Thomas N.
