Métodos de resolución de problemas: Aplicación al diseño de sistemas inteligentes Martin Molina, 2006-09-01 Desde que en 1982 Allen Newell public su artículo que sentaba las bases de la necesidad un nivel adicional para análisis y descripción del conocimiento de sistemas inteligentes se han sucedido avances importantes en la forma de concebir y diseñar este tipo de sistemas Dos aspectos destacan entre los resultados más interesantes de la investigación en la década de los 90 en el campo de la ingeniería del conocimiento Por un lado se ha profundizado en el conocimiento sobre cómo las personas resuelven problemas Esto se ha logrado por la vía empírica mediante un trabajo científico de observación experimental por medios computacionales y generalización Por otro lado como logro adicional en este campo de investigación se ha creado un nuevo lenguaje descriptivo como complemento a las formas de representación tradicionales Dicho lenguaje que ha sido aceptado por un amplio número de autores se sitúa en un mayor nivel de abstracción y permite la formulación de arquitecturas más complejas de sistemas basados en el conocimiento El propósito principal del presente texto es servir de base como fuente de información de ambos aspectos recientes del campo de la ingeniería del conocimiento El texto está dirigido a profesionales y estudiantes del campo de la informática que conocen técnicas básicas tradicionales de representación del conocimiento La redacción del presente texto se ha orientado en primer lugar para recopilar y uniformizar la descripción de métodos existentes en la literatura de ingeniería del conocimiento Se ha elegido un conjunto de métodos representativo en este campo que no cubre la totalidad de los métodos existentes pero sí los más conocidos y utilizados en ingeniería del conocimiento presentando una descripción detallada de carácter tanto teórico como práctico El texto describe cada método utilizando una notación común a todos ellos parcialmente basada en los estándares descriptivos seguidos por las metodologías más extendidas Para cada método se incluyen algoritmos definidos de forma expresa para el presente texto con ejemplos detallados de operación Ambos aspectos la uniformización junto a la presentación detallada de la operación suponen una novedad interesante respecto al estado actual de la literatura sobre este campo lo que hace el texto muy adecuado para ser utilizado como libro de consulta como apoyo en la docencia de la asignatura de construcción de sistemas inteligentes [Sistemas inteligentes aplicados a la educación](#) Ramón Zatarain Cabada, María Lucía Barrón Estrada, Karina Mariela Figueroa Mora, 2024-03-05 En esta obra se presentan conceptos y temas básicos de algunas áreas de conocimiento necesarias para desarrollar sistemas computacionales inteligentes aplicados a la educación así como su implementación en cuatro trabajos de investigación que incorporan diferentes técnicas y modelos inteligentes lógica difusa algoritmos genéticos o redes neuronales con el fin de proporcionar al usuario una experiencia de aprendizaje personalizada más adecuada a sus necesidades cognitivas y afectivas DOI <https://doi.org/10.52501/cc.096> **Sistemas Inteligentes** Cassiana Fagundes da Silva, Adquirindo este produto você receber o livro e também terá acesso às videoaulas através de QR codes presentes no próprio livro Ambos relacionados ao tema para facilitar a compreensão do assunto e futuro desenvolvimento de pesquisa Este material contém todos os conteúdos necessários para o seu estudo não

Data Mining In Time Series Databases Horst Bunke, Abraham Kandel, Mark Last, 2004-06-25. Adding the time dimension to real world databases produces Time Series Databases (TSDB) and introduces new aspects and difficulties to data mining and knowledge discovery. This book covers the state of the art methodology for mining time series databases. The novel data mining methods presented in the book include techniques for efficient segmentation indexing and classification of noisy and dynamic time series. A graph based method for anomaly detection in time series is described and the book also studies the implications of a novel and potentially useful representation of time series as strings. The problem of detecting changes in data mining models that are induced from temporal databases is additionally discussed.
