Smart Structures Vinod K. Wadhawan, 2007-10-18 A structure is an assembly that serves an engineering function A smart structure is one that serves this function smartly i.e. by responding adaptively in a pre designed useful and efficient manner to changing environmental conditions Adaptive behaviour of one or more materials constituting a smart structure requires nonlinear response This book describes the three main types of nonlinear response materials ferroic materials soft materials and nanostructured materials Information processing by biological and artificial smart structures is also discussed A smart structure typically has sensors actuators and a control system Progress in all these aspects of smart structures has learnt heavily on mimicking Nature and the all important notion in this context has been that of evolution Artificial Darwinian and Lamarckian evolution holds the key to the development of truly smart structures Modestly intelligent robots are already on the horizon Projections about the low cost availability of adequate computing power and memory size indicate that the future really belongs to smart structures This book covers in a compact format the entire gamut of concepts relevant to smart structures It should be of interest to a wide range of students and professionals in science and engineering

Smart Structures A. V. Srinivasan, D. Michael McFarland, 2001 Smart structures and structural components have unusual abilities they can sense a change in temperature pressure or strain diagnose a problem and initiate an appropriate action in order to preserve structural integrity and continue to perform their intended functions Smart structures can also store processes in memory and learn to repeat the actions taken Among the many applications are aircraft sensors that warn of impending cracks and medical devices that monitor blood sugar and deliver insulin This text provides the basic information needed to analyze and design smart devices and structures Among topics covered are piezoelectric crystals shape memory alloys electrorheological fluids vibration absorbers fiber optics and mistuning A final chapter offers an intriguing view of biomimetics and design strategies that can be incorporated at the microstructural level deriving inspiration from biological structures The design of smart structures is at the cutting edge of engineering research and development and there is a great need for an introductory book on the subject This book will be welcomed by both students and practising engineers

IUTAM Symposium on Smart Structures and Structronic Systems Ulrich Gabbert, H.S. Tzou, 2012-12-06 Proceedings of the IUTAM Symposium on Smart Structures and Structronic Systems held in Magdeburg Germany 26-29 September 2000

Dynamics of Advanced Materials and Smart Structures Kazumi Watanabe, Franz Ziegler, 2013-04-17 Two key words for mechanical engineering in the future are Micro and Intelligence. It is well known that the leadership in the intelligence technology is a matter of vital importance for the future status of industrial society and thus national research projects for intelligent materials structures and machines have started not only in advanced countries but also in developing countries. Materials and structures which have self-sensing diagnosis and actuating systems are called intelligent or smart and are of growing research interest in the world. In this situation the IUTAM symposium on Dynamics of Advanced Materials and Smart Structures was a timely one. Smart materials and structures are those equipped with sensors and actuators to achieve their designed performance in a changing environment. They have complex structural properties and mechanical responses. Many engineering problems such as interface and edge phenomena, mechanical and electro-magnetic interaction coupling and sensing, actuating and control techniques arise in the development of intelligent structures. Due to the multi-disciplinary nature of these problems, all of the classical sciences and technologies such as applied mathematics, material science, solid and fluid mechanics, control techniques and others must be assembled and used to solve them. IUTAM well understands the importance of this emerging technology. An IUTAM symposium on Smart Structures and Structronic Systems Chaired by U

Smart Structures and Materials, 2006 *Spatial Filtering for the Control of Smart Structures* James E. Hubbard, 2009-11-27 What follows is my personal perspective on early events that played a significant role in the formation of the field now known as Smart Structures. It is by no means meant to be all-inclusive or definitive in any way but merely an

account of personal experiences that ultimately lead to the development of the material contained and presented herein On March 23 1983 then President Ronald Reagan announced his intentions to develop a new system to reduce the threat of nuclear attack and end the strategy of mutual deterrence in an address to the nation entitled Address to the Nation on Defense and National Security The system he proposed became known as Star Wars after the popular movie because it was meant to provide a protective shield over the nation from space His speech mobilized the entire nation on a research and development path toward this end Investigations were conducted into new areas such as space based radar large aperture antennae and large exible mirror concepts These proposed systems r resented an entirely new class of structures that proved to provide new challenges in materials structures control systems and modeling For example antennae needed to monitor large areas of real estate in the continental United States required ap tures on the order of 100 m

Mechanical Vibration: Where Do We Stand? Isaac Elishakoff,2007-12-12 There is always a delightful sense of movement vibration and life Theodore Robinson 1852 1896 have never solved a major mechanical or interpretive problem at the keyboard I have always solved it in my mind Jorge Bolet 1914 1990 The idea of this book stems from the realization that scientists not unlike laymen should occasionally interrupt their regular work and reflect on the past to see both the accomplishments and the drawbacks so as to be able to plan for future research in the proper perspective But an inquisitive

reader may ask Can one really document in any field let alone mechanical vibrations whose very name signifies change where do we stand Did not a Greek philosopher famously claim that one cannot enter a river twice Another on an even more sophisticated note added that actually it is impossible to enter a river even once For in the process of entering both entrant and river change Likewise one can argue that it is nearly impossible to answer the question posed in the title of this volume But experience shows despite the sage observations of the philosophers that one does enter a river lake sea or ocean Likewise scientists do stop if not for a minute for a conference to reflect on the past and if not in its detail then at least in big strokes on various topics presented by the participants questions by the listeners often change the research direction of the presenter
