Social Interaction And Language Development In Blind Children:

Language Development and Social Interaction in Blind Children Miguel Perez Pereira, Gina Conti-Ramsden, 2013-05-13

This book provides an up to date account of blind children's developing communicative abilities with particular emphasis on social cognition and language acquisition from infancy to early school age. It purports to foster dialogue between those interested in the study of typically developing children and those interested in the development of children who are blind and to provide insights and new explanations of why the development of blind children may differ from that of sighted children. The book also aims to identify and examine current theoretical issues which are likely to be at the centre of developments in the fields of child language and developmental psychology. Language Development and Social Interaction in Blind Children is also a timely book. The study of blind children's development constitutes a unique opportunity to study the effect of vision on development and more specifically on the development of language and certain aspects of social cognition. Current interest in the development of theory of mind and perspective taking in language learning make the case of blind children crucial to our understanding of certain aspects of psychological functioning. The book explores these issues, challenges some widely held beliefs about the development of communication in blind children and provides a cohesive picture of our knowledge to date.

Children's Language and Communication Difficulties Julie Dockrell, 1999-06-03

Children's language difficulties affect many areas of functioning and development. Since most children with these difficulties are expected to function in ordinary schools and nurseries, it is important that parents, teachers and practitioners have a broad understanding of the issues. Language and communication problems typically fall under the umbrella terms language disability, language delay or language difficulties. They can range from an occasional difficulty with certain sounds to an inability to communicate using spoken language. These problems can occur in isolation or be associated with a range of special needs such as hearing loss, visual impairment or learning disabilities. This is the first introductory text to outline the difficulties experienced by children and link these to issues surrounding multidisciplinary assessment, intervention and service provision. Children's Language and Communication Difficulties offers professionals and parents an up to date account of the developmental language problems that children experience, the provision available to meet the child's needs, the long term impact of language difficulties. The authors examine the problems of identification and diagnosis and explore the range of physical and cognitive disabilities associated with language problems. They have also looked closely at alternative forms of communication and have provided the reader with discussion and evaluation of recently developed intervention techniques.

Amy Work Needham, 2016-03-17 How do young infants experience the world around them How similar or different are infants experiences from adults experiences of similar situations How do infants progress from relatively sparse knowledge and expectations early in life to much more elaborate knowledge and expectations just several months later We know that much of infants learning before four to five months of age is visually based As they develop the ability to reach for objects independently they can explore objects that are of particular interest to them a new skill that must be important for their learning Through this transition to independent reaching and exploration infants go a long way toward forming their own understandings of the objects around them Towards the end of the first year of life infants begin manipulating one object relative to another and this skill sets the stage for them to begin using objects instrumentally using one object to create changes in other objects This new ability opens up many opportunities for infants to learn about using tools In this volume Amy Work Needham provides an extensive overview of her research on infant learning with a particular focus on how infants learn about objects She begins with an explanation of how basic aspects of how infants visual exploration of objects allows them to create new knowledge about objects and object categories She continues with a description of infants visual and manual learning about hand held tools and how these tools can be used to achieve goals Throughout she focuses on active learning and development which results in infants making important contributions to their own learning about objects She concludes by synthesizing the findings discussed pulls out recurring themes across studies and brings together fundamental principles of how infants learn about objects *Blackwell Handbook of Language Development* Erika Hoff, Marilyn
