Gómez M.,2012-12-06

Mathematical models have been very successful in the study of the physical world Galilei and Newton introduced point particles moving without friction under the action of simple forces as the basis for the description of concrete motions like the ones of the planets This approach was sustained by appropriate mathematical methods namely infinitesimal calculus which was being developed at that time In this way classical analytical mechanics was able to establish some general results gaining insight through explicit solution of some simple cases and developing various methods of approximation for handling more complicated ones Special relativity theory can be seen as an extension of this kind of modelling In the study of electromagnetic phenomena and in general relativity another mathematical model is used in which the concept of classical field plays the fundamental role The equations of motion here are partial differential equations and the methods of study used involve further developments of classical analysis These models are deterministic in nature However it was realized already in the second half of last century through the work of Maxwell Boltzmann Gibbs and others that in the discussion of systems involving a great number of particles the deterministic description is not by itself of great help in particular a suitable weighting of all possible initial conditions should be considered **The Pursuit of Attention** Charles

Derber,2000-06-15 Enough about me goes the old saying what about you What do you think about me Hence the pursuit of attention is alive and well Even the Oxford English Dictionary reveals a modern coinage to reflect the chase in our technological age ego surfing searching the Internet for occurrences of your own name What is the cause of this obsessive need for others recognition This useful and popular volume now in a second edition that features major new introductory and concluding essays entertainingly ponders this question Derber argues that there is a general lack of social support in today s America one which causes people to vie hungrily for attention and he shows how individuals will often employ numerous techniques to turn the course of a conversation towards themselves Illustrating this conversational narcissism with sample

dialogues that will seem disturbingly familiar to all readers this book analyzes the pursuit of attention in conversation as well as in politics and celebrity culture and demonstrates the ultimate importance of gender class and racial differences in competing for attention Derber shows how changes in the economy and culture such as the advent of the Internet have intensified the rampant individualism and egotism of today And finally in a new afterword he focuses on solutions how to restructure the economy and culture to humanize ourselves and increase the capacity for community empathy and attention giving

Food and the Status Quest Polly Wiessner, Wulf Schiefenhövel, 1996 This book brings together contributions from different disciplines to investigate from ethological and anthropological perspectives behaviour that appears to have biological roots such as the tendency to seek status through the medium of food

Johnston,2015-12-03 Is there a growing gap in today s world between cultural aspirations and their fulfillment a gap that is increasing social problems of all kinds If so what forces are producing that gap How can these forces be changed To answer these questions Phillips and Johnston employ a very broad approach to the scientific method drawing evidence from a wide variety of data and sources including sociologists psychologists political scientists historians philosophers educators psychiatrists and novelists They find substantial evidence for a widening gap suggesting an invisible crisis throughout contemporary society They also find substantial evidence that a simplistic and static metaphysical stance or worldview is largely responsible for that gap and that an alternative worldview can work to close that gap

The Marketplace of Attention James G. Webster,2014-09-05 How do media find an audience when there is an endless supply of content but a limited supply of public attention Feature films television shows homemade videos tweets blogs and breaking news digital media offer an always accessible apparently inexhaustible supply of entertainment and information Although choices seems endless public attention is not How do digital media find the audiences they need in an era of infinite choice In The Marketplace of Attention James Webster explains how audiences take shape in the digital age Webster describes the factors that create audiences including the preferences and habits of media users the role of social networks the resources and strategies of media providers and the growing impact of media measures from ratings to user

recommendations He incorporates these factors into one comprehensive framework the marketplace of attention In doing so he shows that the marketplace works in ways that belie our greatest hopes and fears about digital media Some observers claim that digital media empower a new participatory culture others fear that digital media encourage users to retreat to isolated enclaves Webster shows that public attention is at once diverse and concentrated that users move across a variety of outlets producing high levels of audience overlap So although audiences are fragmented in ways that would astonish midcentury broadcasting executives Webster argues that this doesn't signal polarization He questions whether our preferences are immune from media influence and he describes how our encounters with media might change our tastes In the digital era's marketplace of attention Webster claims we typically encounter ideas that cut across our predispositions In the process we will remake the marketplace of ideas and reshape the twenty first century public sphere **From Nazareth**
