Engineering Hollywood Luci Marzola, 2021-03-01 *Engineering Hollywood* tells the story of the formation of the Hollywood studio system not as the product of a genius producer but as an industry that brought together creative practices and myriad cutting edge technologies in ways that had never been seen before Using extensive archival research this book examines the role of technicians engineers and trade organizations in creating a stable technological infrastructure on which the studio system rested for decades Here the studio system is seen as a technology dependent business with connections to the larger American industrial world By focusing on the role played by technology we see a new map of the studio system beyond the backlots of Los Angeles and the front offices in New York In this study Hollywood includes the labs of industrial manufacturers the sales routes of independent firms the garages of tinkerers and the clubhouses of technicians societies Rather than focusing on the technical improvements in any particular motion picture tool this book centers on the larger systems and infrastructures for dealing with technology in this creative industry *Engineering Hollywood* argues that the American industry was stabilized and able to dominate the motion picture field for decades through collaboration over technologies of everyday use Hollywood s relationship to its essential technology was fundamentally one of interdependence and cooperation with manufacturers trade organizations and the competing studios As such Hollywood could be defined as an industry by participation in a closed system of cooperation that allowed a select group of producers and manufacturers to dominate the motion picture business for decades

Artificial Parts, Practical Lives Katherine Ott, David Serlin, Stephen Mihm, 2002 From the wooden teeth of George Washington to the Bly prosthesis popular in the 1860s and boasting easy uniform motions of the limb to today's lifelike approximations prosthetic devices reveal the extent to which the evolution and design of technologies of the body are intertwined with both the practical and subjective needs of human beings The peculiar history of prosthetic devices sheds light on the relationship between technological change and the civilizing process of

modernity and analyzes the concrete materials of prosthetics which carry with them ideologies of body ideals body politics and culture Simultaneously critiquing historicizing and theorizing prosthetics *Artificial Parts Practical Lives* lays out a balanced and complex picture of its subject neither vilifying nor celebrating the merger of flesh and machine **A**

Companion to the Philosophy of Technology Jan Kyrre Berg Olsen, Stig Andur Pedersen, Vincent F. Hendricks, 2012-10-01 Drawing on essays from leading international and multi disciplinary scholars *A Companion to the Philosophy of Technology* is the first comprehensive and authoritative reference source to cover the key issues of technology s impact on society and our lives Presents the first complete authoritative reference work in the field Organized thematically for use both as a full introduction to the field or an encyclopedic reference Draws on original essays from leading interdisciplinary scholars Features the most up to date and cutting edge research in the interdisciplinary fields of philosophy technology and their broader intellectual environments *The Making of Home* Judith Flanders, 2014-10-01 The idea that home is a special place

a separate place a place where we can be our true selves is so obvious to us today that we barely pause to think about it But as Judith Flanders shows in this revealing book home is a relatively new concept When in 1900 Dorothy assured the citizens of Oz that There is no place like home she was expressing a view that was a culmination of 300 years of economic physical and emotional change In *The Making of Home* Flanders traces the evolution of the house across northern Europe and America from the 16th to the early 20th century and paints a striking picture of how the homes we know today differ from homes through history The transformation of houses into homes she argues was not a private matter but an essential ingredient in the rise of capitalism and the birth of the Industrial Revolution Without home the modern world as we know it would not exist and as Flanders charts the development of ordinary household objects from cutlery chairs and curtains to fitted kitchens plumbing and windows she also peels back the myths that surround some of our most basic assumptions including our entire notion of what it is that makes a family As full of fascinating detail as her previous bestsellers *The Making of Home* is also a book teeming with original and provocative ideas *The Technology of Orgasm* Rachel P.

Maines, Rachel Maines, 2001-06-15 The author explores hysteria in Western medicine throughout the ages and examines the characterization of female sexuality as a disease requiring treatment Medical authorities she writes were able to defend and justify the clinical production of orgasm in women as necessary to maintain the dominant view of sexuality which defined sex as penetration to male orgasm a practice that consistently fails to produce orgasm in a majority of the female population This male centered definition of satisfying and healthy coitus shaped not only the development of concepts of female sexual pathology but also the instrumentation designed to cope with them
