## **Social Learning And Imitation:**

Social Learning and Imitation Miller, John Dollard, 1979      Social learning and imitation by Neal E. Miller and John Dollard Neal Elgar Miller, 1953      *Recent Trends in Social Learning Theory* Ross D. Parke, 2014-05-10 Recent Trends in Social Learning Theory offers a convenient overview of the state of social learning theory This book is organized into six chapters Chapter 1 provides a detailed discussion of the social learning theory followed by an analysis of the theoretical views on the social reinforcement issue in Chapter 2 The contiguity theory of modeling and important role played by symbolic coding processes in imitation are described in Chapter 3 Chapter 4 elaborates the developmental analysis of imitation while Chapter 5 outlines an empirical and theoretical overview of the status of punishment and its role in the development of self control in children The last chapter summarizes the contributions compiled in this text This publication is recommended for students and professionals in child development and social and clinical psychology      **Social learning and imitation** Neal E. ; Dollard Miller (John), 2023      **Social Learning and Imitation** Miller, Neal Elgar Miller, John Dollard, 2000      **Apes, Monkeys, Children, and the Growth of Mind** Juan Carlos Gómez, 2009-07 What can the study of young monkeys and apes tell us about the minds of young humans In this fascinating introduction to the study of primate minds Juan Carlos Gomez identifies evolutionary resemblances and differences between human children and other primates He argues that primate minds are best understood not as fixed collections of specialized cognitive capacities but more dynamically as a range of abilities that can surpass their original adaptations In a lively overview of a distinguished body of cognitive developmental research among nonhuman primates Gomez looks at knowledge of the physical world causal reasoning including the chimpanzee like errors that human children make and the contentious subjects of ape language theory of mind and imitation Attempts to teach language to chimpanzees as well as studies of the quality of some primate vocal communication in the wild make a powerful case that primates have a natural capacity for relatively sophisticated communication and considerable power to learn when humans teach them Gomez concludes that for all cognitive psychology s interest in perception information processing and reasoning some essential functions of mental life are based on ideas that cannot be explicitly articulated Nonhuman and human primates alike rely on implicit knowledge Studying nonhuman primates helps us to understand this perplexing aspect of all primate minds      **Bounded Rationality** Gerd Gigerenzer, Reinhard Selten, 2002-07-26 In a complex and uncertain world humans and animals make decisions under the constraints of limited knowledge resources and time Yet models of rational decision making in economics cognitive science biology and other fields largely ignore these real constraints and instead assume agents with perfect information and unlimited time About forty years ago Herbert Simon challenged this view with his notion of bounded rationality Today bounded rationality has become a fashionable term used for disparate views of reasoning This book promotes bounded rationality as the key to understanding how real people make decisions Using the concept of an adaptive toolbox a repertoire of fast and frugal rules for decision

making under uncertainty it attempts to impose more order and coherence on the idea of bounded rationality The contributors view bounded rationality neither as optimization under constraints nor as the study of people's reasoning fallacies The strategies in the adaptive toolbox dispense with optimization and for the most part with calculations of probabilities and utilities The book extends the concept of bounded rationality from cognitive tools to emotions it analyzes social norms imitation and other cultural tools as rational strategies and it shows how smart heuristics can exploit the structure of environments

*The Evolution of Human Cleverness* Richard Hallam, 2022-05-01

The Evolution of Human Cleverness presents a unique introduction to the way human cognitive abilities have evolved. The book comprises a series of mini essays on distinct topics in which technical terms are simplified considering how humans made the long journey from our ape like ancestors to become capable of higher level reasoning and problem solving. All the topics are cross linked allowing the reader to dip in and out but certain key concepts run through the underlying reasoning. Chiefly these are adaptation and selection, the distinction between ultimate and proximate causes of behaviour, gene culture co evolution and domain general versus domain specific cognitive processes. The book should help the reader draw lessons for the human species as a whole especially in view of the environmental threats to its own existence. Entries have been carefully crafted to cut through scientific jargon providing bite sized and digestible chunks of knowledge making the topic accessible for students and lay readers alike. The author draws on research from diverse fields including Psychology, Anthropology, Archaeology, Biology and Neuroscience to provide an unbiased account of the field making it an ideal text for students of all levels.

*Imitation and Social Learning in Robots, Humans and Animals* Chrystopher L. Nehaniv, Kerstin Dautenhahn, 2009-04-09. Mechanisms of imitation and social matching play a fundamental role in development, communication, interaction, learning and culture. Their investigation in different agents, animals, humans and robots has significantly influenced our understanding of the nature and origins of social intelligence. Whilst such issues have traditionally been studied in areas such as psychology, biology and ethnology, it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation, demonstration and social interaction rather than by explicit programming. This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field, consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots, humans and animals.
