Institutional Learning and Knowledge Transfer Across Epistemic Communities Elias G. Carayannis,Ali Pirzadeh,Denisa Popescu,2011-11-25 Over the past several decades as the pace of globalization has accelerated operational issues of international coordination have often been overlooked For example the global financial crisis that began in 2007 is attributed in part to a lack of regulatory oversight As a result supranational organizations such as the G 20 the World Bank and the International Monetary Fund have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies international co operation and international financial institutions Prevailing characteristics of the global economic systems such as the increasing power of financial institutions changes in the structure of global production decline in the authority of nation states over their national economy and creation of global institutional setting e g global governance have created the conditions for a naturally evolving process towards enabling national

epistemic communities to create institutions that comply with global rules and regulations can control crises In this context transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to convince participants in the international system to have similar ideas about which rules will govern their mutual participation In the realm of finance and banking regulation the primary focus is on transfer of specialized and procedural knowledge in technical domains such as accounting procedures payment systems and corporate governance principles thereby promoting institutional learning at national and local levels In this volume the authors provide in depth analysis of initiatives to demonstrate how this type of knowledge generated at the international organization level is codified into global standards and disseminated to members particularly in the developing world where the legal and regulatory infrastructure is often lacking They argue that despite the challenges when a country intends to join the global system its institutions and economic structures need to move toward the global norms In so doing they shed new light on the dynamics of knowledge transfer financial regulation economic development with particular respect to supporting global standards and avoiding future crises

Ideals and Illusions Thomas McCarthy,1993 These lucid and closely reasoned studies of the thought of Jacques Derrida Michel Foucault J rgen Habermas and Richard Rorty provide a coherent analysis of major pathways in recent critical theory They defend a position analogous to Kant s that ideas of reason are both unavoidable presuppositions of thought that have to be carefully reconstructed and persistent sources of illusions that have to be repeatedly deconstructed McCarthy examines the critique of impure reason from the complementary viewpoints of the attackers and defenders of Enlightenment rationality He first analyzes the work of Rorty Foucault and Derrida to determine what these radical critics have contributed to our understanding of reason and where they have gone wrong He explores Habermas s theory of communicative rationality focusing on the attempt to go beyond hermeneutics the incorporation of systems theory the implications of discourse ethics for our understanding of political debate and collective decision making and the relation of political theology to critical social theory Thomas McCarthy is Professor of Philosophy at Northwestern University and the editor of The MIT Press series Studies in Contemporary German Social Thought The analysis and assessment of Habermas s recent work in *Ideals and Illusions* serves as a sequel to his earlier study *The Critical Theory of J rgen Habermas*
