Bodies of Thought Ian Burkitt,1999-09-13 In this incisive and truly impressive book Ian Burkitt critically addresses the dualism between mind and body thought and emotion rationality and irrationality and the mental and the material which haunt the post Cartesian world Drawing on the work of contemporary social theorists and feminist writers he argues that thought and the sense of being a person is inseparable from bodily practices within social relations even though such active experience may be abstracted and expanded upon through the use of symbols Overcoming classic dualisms in social thought Burkitt argues that bodies are not purely the constructs of discourses of power they are also productive communicative and invested with powerful capacities for chang

Post-Human Futures Mark Carrigan,Douglas V. Porpora,2021-04-12 This volume engages with post humanist and transhumanist approaches to present an original exploration of the question of how humankind will fare in the face of artificial intelligence With emerging technologies now widely assumed to be calling into question assumptions about human

beings and their place within the world and computational innovations of machine learning leading some to claim we are coming ever closer to the long sought artificial general intelligence it defends humanity with the argument that technological advances introduced artificially into some humans do not annul their fundamental human qualities Against the challenge presented by the possibility that advanced artificial intelligence will be fully capable of original thinking creative self development and moral judgement and therefore have claims to legal rights the authors advance a form of essentialism that justifies providing a decent minimum life for all persons As such while the future of the human is in question the authors show how dispensing with either the category itself or the underlying reality is a less plausible solution than is often assumed

Nature: The nature of human nature David Inglis,John Bone,Rhoda Wilkie,2005 Many influential stances within the social sciences regard nature in one of two ways either as none of their concern which is with the social and cultural aspects of human existence or as wholly a social and cultural fabrication But there is also another strand of social scientific thinking that seeks to understand the interplay between social and cultural factors on one side and natural factors on the other These volumes contain the main contributions that have been made within each of these streams of thought The selections illustrate to the reader the complexity of the various positions within these streams and the strengths and limitations of each perspective A new introduction places these articles in their historical and intellectual context and the volumes are completed with an extensive index and chronological table of contents The ECPH Encyclopedia of Psychology

,2025-01-11 This encyclopedia volume comprehensively reflects the basic knowledge and the latest research results in the field of psychology In this reference book the knowledge system basic concepts basic theories as well as important figures representative works and institutions of psychology are well organized in encyclopedic entries The whole work includes more than 1 300 entries and about 570 figures making it a full and detailed introduction to the origin and development of psychology **Human Characteristics** Preben Bertelsen,Henrik Høgh-Olesen,Jan Tønnesvang,2009-01-23 Every once in a while we have to reconsider the perennial questions concerning human nature What are the special human behaviours social practices and psychological structures that make us particularly human The field of evolution psychology and cognitive science is the most expanding inter disciplinary area of this field for the time being uniting different sciences under the same

evolutionary paradigm and keeping them occupied by the same eternal questions stated above Relevant data and theoretical considerations are piling up but an overview is needed To facilitate this a large inter disciplinary conference entitled Human Mind Human Kind was held at Aarhus University Denmark The studies fall into three well defined sections 1 Evolution and Cognition Comparative and Developmental Perspectives 2 Human Sociality Morality and Religiosity 3 Human Sexuality and Mating Strategies Specifying the differences between our own species and the rest of the animal world always provokes debate But these demarcations simply have to be drawn once and again They focus attention and stimulate research exactly because they provoke and challenge other researchers to take up the glove and prove us wrong **The Self and Social**

Relations Matthew Whittingham, 2018-06-29 This book is concerned with the human individual and her relationship with the communities of which she is a member It argues against the traditional atomistic view that individuals are essentially independent of the social relations into which they enter and instead argues for the holistic view that we are essentially social beings who cannot exist apart from normative communities Matthew Whittingham engages in a sustained exploration and criticism of the classic Western picture of epistemology He argues instead that communities ground the possibility of our forming a conception of the world and ourselves that those social relations open up a range of affective responses and forms of action that would otherwise be impossible they enable us to know and reason about the world and they make possible the daily struggles for freedom and self realization that are familiar to us all and find their most powerful expression in major social movements *Canadian Journal of Political and Social Theory*, 1983 **Concepts and Theories of Human**
