Social Shaping Of Science:

The social shaping of science, 1971 **New Infrastructures for Knowledge Production** Christine Hine, 2006-01-01
This book offers an overview of the practices and the technologies that are shaping the knowledge production of the future
Provided by publisher **The social Shaping of technology**, 1987 **The SAGE Companion to the City** Tim Hall, Phil Hubbard, John Rennie Short, 2008-05-21
This book pulls together an exceptional range of literature in addressing the complexity of contemporary patterns and processes of urbanization. It offers a rich array of concepts and theories and is studded with fascinating examples that illustrate the changing nature of cities and urban life. Paul Knox, Virginia Tech University.
The SAGE Companion to the City is a tour de force of contemporary urban studies. At once a stocktake showcase and springboard for scholarly approaches to cities and city life, the editors have assembled a cohesive and convincing set of lucid insightful and critical essays of great quality. Eschewing grand theory and deadening encyclopaediaism, the contributors refresh both longstanding concerns and explore new themes in ways both brilliantly accessible to newcomers and satisfying to the cognoscenti. Robert Freestone, University of New South Wales.
Organized in four sections, **The SAGE Companion to the City** provides a systematic A-Z to understanding the city that explains the interrelations between society, culture and economy. **Histories** explores power, religion, science and technology, modernity and the landscape of the city. **Economies and Inequalities** explores work and leisure, globalisation, innovation and the role of the state. **Communities** explores migration and settlement, segregation and division, civility, housing and homelessness. **Order and Disorder** explores politics and policy, planning and conflict, law and order, surveillance and terror. An accessible guide to all areas of urban studies, the text offers both a contemporary cutting edge reflection and measured historical and geographical reflection on urban studies. It will be essential reading for students of any discipline interested in the city as an object of study.
World Wide Research William H. Dutton, Paul W. Jeffreys, 2010
Advances in information and communication technology are transforming the way scholarly research is conducted across all disciplines. The use of increasingly powerful and versatile computer based and networked systems promises to change research activity as profoundly as the mobile phone, the Internet and email have changed everyday life. This book offers a comprehensive and accessible view of the use of these new approaches called e-Research and their ethical, legal and institutional implications. The contributors, leading scholars from a range of disciplines, focus on how e-Research is reshaping not only how research is done but also, and more important, its outcomes. By anchoring their discussion in specific examples and case studies, they identify and analyze a promising set of practical developments and results associated with e-Research innovations. The contributors, who include Geoffrey Bowker, Christine Borgman, Paul Edwards, Tim Berners-Lee and Hal Abelson, explain why and how e-Research activity can reconfigure access to networks of information, expertise and experience, changing what researchers observe, with whom they collaborate, how they share information, what methods they use to report their findings and what knowledge is required to do this. They discuss both the means of e-
