High Magnetic Field Science and Its Application in the United States National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States, 2013-11-25 The Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States was convened by the National Research Council in response to a request by the National Science Foundation This report answers three questions 1 What is the current state of high field magnet science engineering and technology in the United States and are there any conspicuous needs to be addressed 2 What are the current science drivers and which scientific opportunities and challenges can be anticipated over the next ten years 3 What are the principal existing and planned high magnetic field facilities outside of the United States what roles have U S high field magnet development efforts played in developing those facilities and what potentials exist for further international collaboration in this area A magnetic field is produced by an electrical current in a metal coil This current exerts an expansive force on the coil and a magnetic field is high if it challenges the strength and current carrying capacity of the materials that create the field Although lower magnetic fields can be achieved using commercially available magnets research in the highest achievable fields has been and will continue to be most often performed in large research centers that possess the materials and systems know how for forefront research Only a few high field centers exist around the world in the United States the principal center is the National High Magnetic Field Laboratory NHMFL High Magnetic Field Science and Its Application in the United States considers continued support for a centralized high field facility such as NHFML to be the highest priority This report contains a recommendation for the funding and siting of several new high field nuclear magnetic resonance magnets at user facilities in different regions of the United States Continued advancement in high magnetic field science requires substantial investments in magnets with

enhanced capabilities High Magnetic Field Science and Its Application in the United States contains recommendations for the further development of all superconducting hybrid and higher field pulsed magnets that meet ambitious but achievable goals Synchrotron Radiation Techniques in Industrial, Chemical, and Materials Science Kevin L. D'Amico, Louis J. Terminello, David K. Shuh, 2012-12-06 The individual papers that comprise this monograph are derived from two American Chemical Society ACS Fall National Meetings that focused on the current uses of synchrotron radiation SR research techniques The first Symposium was held in Washington DC in August 1994 and the second convened in Chicago IL in August 1995 The intent of these symposia was to present a broad overview of several current topics in industrial chemical and materials based SR research to a chemically inclined audience The SR techniques covered were divided roughly into the three general fields of industrial chemical and materials science for this purpose Included within these four categories are environmental geologic atomic molecular analytical solid state physics surface science and biological applications of SR There is little doubt that structural biology and environmental science are the largest growth areas in SR research as this monograph goes to press The spirit of these symposia was to bring together the expert synchrotron radiation user with new and potential users of SR techniques There are now a preponderance of particle storage rings located throughout the world devoted exclusively to the production of SR There have been great improvements in the particle accelerators and storage rings from which SR emanates These newest third generation SR sources are the result of the successful collaboration between SR users and accelerator physicists which has made a reality out of experiments never before possible
