Strange Behavior Tales Of Evolutionary Neurology:

Strange Behavior Harold L. Klawans, 2001 A master neurologist's clinical tales both funny and profound of the evolution of the brain No matter what the ailment painful foot syndrome or mad cow disease Dr Klawans ultimately treated or diagnosed people's brains Here are his deductions from years of study *Strange Behavior* Harold Leo Klawans, 2001

Racial and Ethnic Disparities in Health and Health Care Elene V. Metros, 2006 It is generally conceded that there are significant disparities in health and health care based on a person's racial and ethnic background Infant mortality rates for black babies remain nearly two and one half times higher than for whites The life expectancy for black men and women remains at nearly one decade fewer years of life compared with their white counterparts Rates of death attributable to heart disease stroke prostate and breast cancer remain much higher in black populations Diabetes disease rates are more than 30 percent higher among Native Americans and Hispanics than among whites Minorities remain grossly under represented in the health professions workforce relative to their proportions in the population In addition despite a large and growing body of scientific evidence many patients and providers remain unaware that racial and ethnic health care disparities are a problem and perceptions about health care inequalities vary between minorities and whites closing the disparity gap This book presents new research focusing on these disparities Eyes on Ice & No Blind Mice Saad Shaikh M. D., Saad Shaikh, 2007 A travelogue full of adventure A Place to Belong is the story of a young teenage boy's search for self worth and faith in a cruel world Paul Miller was eight years old when his parents took him on a mystifying zigzagging journey from Detroit to Florida to California and back again His father's tenuous grip on reality becomes as changeable as the landscapes they travel through Paul's simple questions are ignored or answered by the back of his Father's hand Paul jumps the roof tops of Detroit slums butts heads with the gangs of Los Angeles and gets caught up in a world of petty theft Life hangs by a thread the surprising kindness of a loving family a filthy motorist with a penchant for young boys the kiss of a young girl Along the way Noah a wise fisherman shows Paul that God isn't some imperious judge sitting on top of a throne but can become your best friend a buddy you can talk to But can such a simple view account for all the misery Paul experiences In this captivating and at turns humorous story a young man travels into the depths of despair and back again to find a place he can call home I got hooked and couldn't stop This is a splendidly written story and quite a story to tell So candid unpretentious and courageous David Morris Senior Editor Guideposts Books Miller tells a remarkable story one that is in a sense an American Angela's Ashes but with the added element of faith as a factor in surviving an incredibly rough childhood Michael Wilt Editor Nimble Spirit **Planning and Design of Engineering Systems** Graeme Dandy, David Walker, Trevor Daniell, Robert Warner, 2018-04-17 Providing students with a commonsense approach to the solution of engineering problems and packed full of practical case studies to illustrate the role of the engineer the type of work involved and the methodologies employed in engineering practice this textbook is a comprehensive introduction to the scope and nature of engineering It

outlines a conceptual framework for undertaking engineering projects then provides a range of techniques and tools for solving the sorts of problems that commonly arise Focusing in particular on civil engineering design problem solving and the range of techniques and tools it employs the authors also explore creativity and problem solving social and environmental issues management communications and law and ethics the planning design modelling and analysis phases and the implementation or construction phase Designed specifically for introductory courses on undergraduate engineering programs this extensively revised and extended second edition is an invaluable resource for all new engineering undergraduates as well as non specialist readers who are seeking information on the nature of engineering work and how it is carried out

Adam's Navel Michael Sims,2004-06-29 In this amusing and brilliantly conceived book Michael Sims introduces you to your body Moving from head to toe Sims blends cultural history with evolutionary theory to produce a wonderfully original narrative in which he analyzes the visible parts of the body In this fascinating brew of science and storytelling readers encounter not only accessible explanations of the mechanics of their anatomy but also the layers of mythology religious lore history Darwinian theory and popular culture that have helped to shape our understanding of any given body part A titillating and unique book Adam s Navel is learned and entertaining a marvelous lens through which to study the form we all inhabit but may not really understand

Neocortical Modularity and the Cell Minicolumn Manuel F. Casanova,2005 Our everyday view of the world may not necessarily be the most comprehensive one In this regard neuropathologists should temper opinions based on a limited representation of reality Microscopy freezes in time a two dimensional representation of a minute histological process One must acquire knowledge of the physiology of the lesion before reaching a multidimensional diagnosis In the case of mental disorders the modular organisation of the cortex may offer some clues to underlying aetiology It is tissue rather than individual cells that provides for the phenomena of perceptual binding and gamma frequencies It is the continuous re entry of excitation into neuronal networks that provides for selective attention The basis for language and its semantic content resides in the conjoint activation of topographically diverse brain regions This book is designed to focus on the lowest hierarchical element within the modular organisation of the brain the cell minicolumn The minicolumn is a self contained ecosystem of neurons and their connections that repeats itself throughout the extent of the neocortex Although a few neuroanatomists at the turn of the century called attention to the vertical arrangement of the cortex Vernon Mountcastle provided physiological proof in the 1950 s for its existence and its role in perception *Ichnology Newsletter* ,2002

Defending the Cavewoman Harold L. Klawans,2000-01-01 A neurologist and author draws on his own clinical practice to discuss the evolution of the human brain and the origins of a range of neurological ailments **Mind as Machine**

Margaret A. Boden,2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The

quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years
