**Writing the Heavens** Aura Heydenreich,Florian Klaeger,Klaus Mecke,Dirk Vanderbeke,Jörn Wilms,2024-12-30 In the Middle Ages and early modernity celestial observation was frequently a subject for verbal rather than numerical and geometrical recording These records can now be difficult to decode since what they address is frequently obscured by formal conventions of genre imagery rhetoric prosody to name but a few The volume collects essays exploring such configurations between literature and observation from Europe to China How contributors ask were verbal representations of celestial

phenomena encoded and self consciously placed vis vis other systems of representation and knowledge What kinds of data are represented and what are the modes in which they are communicated What interpretational problems arise when present day disciplines like climatology meteorology geophysics and astronomy but also literary studies try to access them How were discourses on religion law anthropology aesthetics colonialism etc linked in and through their verbal presentation with astronomical observation and knowledge How did individual scholars texts and concepts travel between European and non European cultures both in space and in time and which constructions of self and other arose in the process

**Newton's Gravity** Douglas W. MacDougal, 2012-12-16 Newton s Gravity conveys the power of simple mathematics to tell the fundamental truth about nature Many people for example know the tides are caused by the pull of the Moon and to a lesser extent the Sun But very few can explain exactly how and why that happens Fewer still can calculate the actual pulls of the Moon and Sun on the oceans This book shows in clear detail how to do this with simple tools It uniquely crosses disciplines history astronomy physics and mathematics and takes pains to explain things frequently passed over or taken for granted in other books Using a problem based approach Newton s Gravity explores the surprisingly basic mathematics behind gravity the most fundamental force that governs the movements of satellites planets and the stars Author Douglas W MacDougal uses actual problems from the history of astronomy as well as original examples to deepen understanding of how discoveries were made and what they mean Newton s Gravity concentrates strongly on the development of the science of orbital motion beginning with Galileo Kepler and Newton each of whom is prominently represented Quotes and problems from Galileo s Dialogs Concerning Two New Sciences and particularly Newton s Principia help the reader get inside the mind of those thinkers and see the problems as they saw them and experience their concise and typically eloquent writing This book enables students and curious minds to explore the mysteries of celestial motion without having to know advanced mathematics It will whet the reader s curiosity to explore further and provide him or her the tools mathematical or physical to do so

*Clocks in the Sky* Geoff McNamara, 2009-04-24 Pulsars are rapidly spinning neutron stars the collapsed cores of once massive stars that ended their lives as supernova explosions In this book Geoff McNamara explores the history subsequent discovery and contemporary research into pulsar astronomy The story of pulsars is brought right up to date with the announcement in 2006 of a new breed of pulsar Rotating Radio Transients RRATs which emit short bursts of radio signals separated by long pauses These may outnumber conventional radio pulsars by a ratio of four to one Geoff McNamara ends by pointing out that despite the enormous success of pulsar research in the second half of the twentieth century the real discoveries are yet to be made including perhaps the detection of the hypothetical pulsar black hole binary system by the proposed Square Kilometre Array the largest single radio telescope in the world

**The Perfect Theory** Pedro G. Ferreira, 2018-06-01 One of the best popular accounts of how Einstein and his followers have been trying to explain the universe for decades Kirkus Reviews starred review Physicists have been exploring debating and questioning the general theory of relativity ever since Albert Einstein first presented it in 1915 This has driven their work to unveil the universe s surprising secrets even further and many believe more wonders remain hidden within the theory s tangle of equations waiting to be exposed In this sweeping narrative of science and culture an astrophysicist brings general relativity to life through the story of the brilliant physicists mathematicians and astronomers who have taken up its challenge For these scientists the theory has been both a treasure trove and an enigma Einstein s theory which explains the relationships among gravity space and time is possibly the most perfect intellectual achievement of modern physics yet studying it has always been a controversial endeavor Relativists were the target of persecution in Hitler s Germany hounded in Stalin s Russia and disdained in 1950s America Even today PhD

students are warned that specializing in general relativity will make them unemployable Still general relativity has flourished delivering key insights into our understanding of the origin of time and the evolution of all the stars and galaxies in the cosmos Its adherents have revealed what lies at the farthest reaches of the universe shed light on the smallest scales of existence and explained how the fabric of reality emerges Dark matter dark energy black holes and string theory are all progeny of Einstein's theory In the midst of a momentous transformation in modern physics as scientists look farther and more clearly into space than ever before The Perfect Theory exposes the greater relevance of general relativity showing us where it started where it has led and where it can still take us     The World in a Selfie Marco D'Eramo,2021-03-16 A

spirited critique of the cultural politics of the tourist age Or why we are all tourists who hate tourists We've all been tourists at some point in our lives How is it we look so condescendingly at people taking selfies in front of the Tower of Pisa Is there really much to distinguish the package holiday from hipster city breaks to Berlin or Brooklyn Why do we engage our free time in an activity we profess to despise The World in a Selfie dissects a global cultural phenomenon For Marco D'Eramo tourism is not just the most important industry of the century generating huge waves of people and capital calling forth a dedicated infrastructure and upsetting and repurposing the architecture and topography of our cities It also encapsulates the problem of modernity the search for authenticity in a world of ersatz pleasures D'Eramo retraces the grand tours of the first globetrotters from Francis Bacon and Samuel Johnson to Arthur de Gobineau and Mark Twain before assessing the cultural meaning of the beach holiday and the UNESCO cide of major heritage sites The tourist selfie will never look the same again
