Common Clinical Dilemmas in Percutaneous Coronary Interventions Eulogio Martinez, Pedro A. Lemos, Andrew T.I. Ong, Patrick W. Serruys, 2007-02-13 Coronary stenting is the most commonly used method of myocardial revascularization with approximately 2 million stents implanted in 2004 throughout the world The development of drug eluting stents has resulted in very low rates of repeat intervention and will further increase the scope for percutaneous coronary intervention The evidence from larg

Ultrasound Imaging João Miguel Sanches, Andrew F. Laine, Jasjit S. Suri, 2011-12-14 Diagnostic and Therapeutic Ultrasound has recently taken an explosive growth for better safer economic mobile and high quality healthcare This technology is very appealing for medical applications because it is non ionizing non invasive and it is available in most of the medical and clinical facilities Its low cost

when compared with other medical image modalities makes it one of the preferred tools for medical monitoring follow up and diagnosis Besides the traditional fields of Cardiology and Obstetrics where it is extensively used for long time it has become also very useful in the diagnosis of diseases of the prostate liver and coronaries and carotids atherosclerosis However Ultrasound images present poor quality very low signal to noise ratio and a lot of artifacts The extraction of useful information from Ultrasound data for diagnosis is a challenge task that makes this medical image modality a very active field of research The difficulties are being overcome and novel and advanced methods are being proposed for detection characterization and segmentation of abnormalities in several organs In fact Ultrasound application range is vast covering almost all organs of the human body including the brain where Transcranial Doppler Ultrasound is very important to assess the brain vasculature This book presents some of the recent advances in Ultrasound imaging technology covering several organs and techniques in a Biomedical Engineering BME perspective The focus of the book is in the algorithms methodologies and systems developed by multidisciplinary research teams of engineers and physicians for Computer Aided Diagnosis CAD purposes Cardiovascular and Cancer the most common life threatening diseases in western countries are two of the most important topics focused in the book However other advanced issues are also presented such as Intravascular Ultrasound 3D US and Ultrasound in Computer Aided Surgery CAS Some chapters are direct contributions from medical research groups where Ultrasound has also received great attention in the last decade By this new techniques based on Ultrasound were introduced in the clinical practice for diagnosis and therapeutics mainly in hospital facilities
