## **Strategic Futures Evolving Missions For Traditional Strategic Delivery Vehicles:**

**Strategic Futures. Evolving Missions for Traditional Strategic Delivery Vehicles**, 1995 This report addresses the post Cold War role of traditional U S strategic nuclear forces nuclear armed long range bombers inter continental ballistic missiles ICBMs and submarine launched ballistic missiles SLBMs from three perspectives 1 Top down goal driven In the new and evolving strategic environment what strategic missions may be needed to fulfill emerging national security objectives 2 Bottom up technology and system driven What technological opportunities are afforded by existing and potential capabilities 3 Policy issues How will various policy choices affect research and development R D acquisition and counterproliferation strategy alternatives The study s objective was to gain a long view of possible directions for future strategic forces and lay out the basis for supportable R D and acquisition initiatives to be pursued by defense agencies and the Services

**Strategic Information Warfare** Roger C. Molander, Andrew Riddile, Peter A. Wilson, Stephanie Williamson, 1996-02-28 Future U S national security strategy is likely to be profoundly affected by the ongoing rapid evolution of cyberspace the global information infrastructure and in particular by the growing dependence of the U S military and other national institutions and infrastructures on potentially vulnerable elements of the U S national information infrastructure To examine these effects the authors conducted a series of exercises employing a methodology known as the Day After in which participants are presented with an information warfare crisis scenario and asked to advise the president on possible responses Participants included senior national security community members and representatives from security related telecommunications and information systems industries The report synthesizes the exercise results and presents the instructions from the exercise materials in their entirety

**In Athena's Camp** John Arquilla, David Ronfeldt, 1997-10-07 The information revolution which is as much an organizational as a technological revolution is transforming the nature of conflict across the spectrum from open warfare to terrorism crime and even radical social activism The era of massed field armies is passing because the new information and communications systems are increasing the lethality of quite small units that can call in deadly precise missile fire almost anywhere anytime In social conflicts the Internet and other media are greatly empowering individuals and small groups to influence the behavior of states Whether in military or social conflicts all protagonists will soon be developing new doctrines strategies and tactics for swarming their opponents with weapons or words as circumstances require Preparing for conflict in such a world will require shifting to new forms of organization particularly the versatile hardy all channel network This shift will prove difficult for states and professional militaries that remain bastions of hierarchy bound to resist institutional redesign They will make the shift as they realize that information and knowledge are becoming the key elements of power This implies among other things that Mars the old brute force god of war must give way to Athena the well armed goddess of wisdom Accepting Athena as the patroness of this information age represents a first step not only for preparing for future conflicts but also for preventing them

*Nuclear Strategy in the*

*Twenty-First Century* Stephen J. Cimbala, 2000-05-30 The future of nuclear weapons and nuclear strategy in the 21st century is not entirely predictable from the Cold War past Nor is it easy to foresee on the basis of what has happened since the Soviet Union collapsed in 1991 Cimbala contends that nuclear weapons and the psychology of nuclear deterrence will remain important after 2000 but the character of that importance will change No longer will nuclear weapons be the dominators of military technology Instead advanced technology conventional weapons based on information and electronics will supplant nuclear weapons as the instruments of military supremacy in the 21st century What Cimbala asks can be expected of nuclear weapons in the 21st century given what we have learned from previous experience in the Cold War and in the 1990s Cimbala expects that nuclear weapons will spread among currently non nuclear states and states with regional grievances or hegemonic aspirations will seek to deploy small nuclear forces as deterrents against neighbors or against outside intervention by the United States in regional conflicts Regional rogue states may also obtain nuclear weapons Nonetheless as Cimbala explains the international balance of power is unlikely to change As he makes clear power will be less dependent on deployed military platforms and more dependent on information warfare A thoughtful and provocative analysis that will be of particular interest to policy makers scholars and other researchers involved with arms control security studies and international relations

**Conventional Military Strategy in the Third Nuclear Age** Joy

Mitra, 2023-02-28 This volume delves into the way conventional deterrence operates between nuclear armed states in the third nuclear age Unlike the first and second ages the advent of this new age has witnessed greater strain on the principles of mutual vulnerability and survivability that may result in increased risks of advertent or inadvertent escalation and horizontal nuclear proliferation The book looks at the sum of three key simultaneous developments in the third nuclear age that merit attention These include the emergence of asymmetric strategies the introduction of unmanned platforms and the expansion of nuclear arsenals The volume discusses how these concurrent developments might shape the practice of conventional deterrence and provides useful insights into conventional military dynamics not just among the current nuclear dyads but also ones that may emerge in future It seeks answers to several key issues in state security not limited to What purpose and scope does the conventional military instrument have in a state's overall military strategy versus other nuclear armed states If mutual vulnerability and deterrence are the frameworks why did the prospect of escalation appear in the first place What are the trends political doctrinal or technological that augment or diminish conventional and nuclear interface With insights on military crises that have witnessed participation from nuclear armed states like the United States Russia

China Pakistan and India this book will especially be of interest to scholars and researchers working in the areas of security and deterrence studies defence and strategic studies peace and conflict studies and foreign policy It will also appeal to policymakers career bureaucrats security and defense practitioners and professionals working with think tanks and embassies
