Systems Optimization Methodology:

Systems Optimization Methodology V. V. Kolbin, 1998 This monograph defines the notion of a system by reference to those systems which exhibit goal oriented behavior and utilize the notion of decision making and controls Such systems allow for phenomenological description and fix the nature of causal transformations of input effects into output quantities The study of consequences of the fact that the systems possess some properties constitutes the content of systems optimization methodology which goes beyond the scope of descriptive classification of systems Chapter 1 deals with philosophical problems of systems methodology An attempt is made to systematize and analyze the problems of scientific methodology as applied to systems modeling methodology which is viewed as the most general concept utilized in modern science Chapter 2 focuses on problems of qualitative analysis in natural and social sciences Attention is drawn to problems of measurement theory and quantitative analysis of systems Approaches and methods of systems analysis and synthesis form the central portion of the book Much study is given to the methods of systems decomposition an integration using both discrete and continuous descriptions of objects processes and phenomena Examples of complex goal oriented systems are also provided The remaining part of the book is largely centered around the methodology of multiobjective systems optimization

Systems Optimization Methodology: Part II Vyacheslav V Kolbin, 1999-03-26 This monograph deals with theoretical fundamentals and numerical methods of optimizing nondetermined models of systems The main body of this work is devoted to investigation and optimization of system models under incomplete information Much consideration is given to one two and multistage problems of stochastic programming solution methods and problems of solution stability Optimization problems with fuzzy variables and optimization problems in function spaces are investigated Examples are given for implementation of specific models of optimization under incomplete information The book is based on lectures delivered by the author since 1965 for undergraduates and postgraduates at St Petersburg Leningrad State University Systems Optimization

Systems Approach to Management of Disasters

Slobodan P. Simonovic, 2011-03-21. The main goal of this text is to introduce the systems approach to disaster management community as an alternative approach that can provide support for interdisciplinary activities involved in the management of disasters. The systems approach draws on the fields of operations research and economics to create skills in solving complex management problems. The text is organized into four parts. Part I provides an introductory discussion of disaster management including an overview of the main terms used. Part II is devoted to the introduction of systems theory, mathematical formalization and classification of methods. The material presented in this section should be of practical relevance during the process of selecting an appropriate tool for the solution of a problem. Part III is technical in nature, providing a simulation approach and a detailed description of system dynamics simulation. This section details two areas of application: flood evacuation simulation and disaster risk assessment. Part IV ends with a chapter covering steps to improve disaster management. Finally, parts of the book can be used as a tool for specialized short courses for practitioners. For example, a course on System analysis for emergency management optimization could be based on Chapters 3, 4 and parts of Chapter 6. Included in the book is a CD with three computer programs: Vensim, PLE, LINPRO and COMPRO. Vensim PLE Personal Learning Edition is state of the art simulation software used for the implementation of system dynamics simulation. The other two programs are LINPRO, a linear programming optimization tool, and COMPRO for the implementation of the multi objective analysis tool of compromise programming.

Optimization Methods for Product and System Design

Anand J. Kulkarni, 2023-06-11. This edited book provides a platform to discuss the state of the art developments associated with traditional and advanced single multi objective criteria optimization methods for addressing problems of performance enhancement of the products and systems design. The book in detail discusses the core ideas, underlying principles, mathematical formulations, critical reviews and experimentations and solutions to complex problems from within the domains such as mechanical engineering design and manufacturing, fault detection and diagnosis, control systems, financial systems, machine learning in medical image processing as well as problems from operations research domain. It will serve as a valuable reference to academicians and industry practitioners involved in improving the efficiency, cost performance and durability of the products and systems. The chapters in this book may further give impetus to explore new avenues leading towards multidisciplinary research discussions associated with the resilience and sustainability of the existing systems.

Optimization Methods Applied to Power Systems II

Francisco G. Montoya, Raúl Baños Navarro, 2021-03-16. Electrical power systems are complex networks that include a set of electrical components that allow distributing the electricity generated in the conventional and renewable power plants to distribution systems so it can be received by final consumers.

businesses and homes In practice power system management requires solving different design operation and control problems Bearing in mind that computers are used to solve these complex optimization problems this book includes some recent contributions to this field that cover a large variety of problems More specifically the book includes contributions about topics such as controllers for the frequency response of microgrids post contingency overflow analysis line overloads after line and generation contingences power quality disturbances earthing system touch voltages security constrained optimal power flow voltage regulation planning intermittent generation in power systems location of partial discharge source in gas insulated switchgear electric vehicle charging stations optimal power flow with photovoltaic generation hydroelectric plant location selection cold thermal electric integrated energy systems high efficiency resonant devices for microwave power generation security constrained unit commitment and economic dispatch problems Microelectrofluidic Systems Tianhao Zhang,Krishnendu Chakrabarty,Richard B.
