Systems With Learning And Memory Abilities:

Systems with Learning and Memory Abilities Jean Delacour (red.), Jean-Claude Levy, 1988 A comparison of the properties of various systems which have learning and memory abilities this book is of a multidisciplinary nature Artificial Intelligence specialists mathematicians physicists biochemists neuroscientists and psychologists are among the contributors Divided into five sections the first considers learning and memory at the behavioral level while the second is a continuation of this dealing with neural bases The third also illustrates a continuity that between neurobiology and basic biology The last two sections are both concerned with models of learning and memory one inspired or constrained mainly by biological facts and the other by physics

Learning and Memory Isidore Gormezano, Edward A. Wasserman, 2013-02-01 This volume presents the views and findings of behaviorally and biologically oriented investigators invited to participate in The University of Iowa's biennial learning and memory symposium While chapters vary in their scope and depth of coverage they are all amply referenced so that researchers teachers and students can obtain background information appropriate to their respective needs

Chemosensory Learning and Memory Milagros Gallo, Edmund Rolls, The contribution of research in the chemosensory field to advancing knowledge on learning and memory mechanisms has a long tradition At the middle of the twentieth century behavioural data provided evidence that taste and olfactory cues led to robust long lasting memories after single learning episodes The peculiar features of some of these types of learning such as conditioned taste aversion in mammals were a challenge for learning theory at the time which was modified in order to integrate the new findings In the following decades the reliability of the behavioural models favoured the application of anatomical neurophysiological and pharmacological techniques prompting great progress in the identification of the specific neural circuits involved in taste and olfactory learning thanks to the use of a variety of invertebrate and vertebrate models In spite of the previous views that considered chemosensory learning as simple models of learning based on its phylogenetic and ontogenetic universality at present the systems level approach is revealing the need to focus on the interactions between a variety of sensory rewarding cognitive emotional and motor systems for a full understanding The great impact on the field of the more recent developments in molecular biology and human neuroimaging techniques are also remarkable Nowadays understanding the brain processes involved in learning and memory requires a wider approach to the experience dependent neural plasticity that includes new phenomena such as adult neurogenesis and epigenetics In fact research on plasticity in the olfactory system is important in both areas Moreover the realms of chemosensory learning and memory have expanded to shed light on social clinical and applied issues thus creating a wide multidisciplinary scene In this context this Research Topic is aimed to offer an updated scene of the present knowledge and questions raised in a rapidly expanding field by gathering views obtained with different species from invertebrate to humans and various techniques

The Memory System Of The Brain Jean Delacour, 1994-04-22 The purpose of this book is to describe the memory system of the brain taking into account all the

levels of neural organization molecule cell small network and anatomical circuit This synthetic approach is necessary for determining the real mechanisms among the potential ones that is the neural bases of learning and memory in intact organisms functioning under normal conditions For this purpose data from molecular cellular and behavioral neurobiology neuropsychology animal and human psychology and neural modellization are comprehensively reviewed by leading specialists and brought together in an original synthesis

Behavioral Neuroscience of Learning and Memory Robert E. Clark, Stephen Martin, 2018-03-27 Behavioral Neuroscience of Learning and Memory brings together the opinions and expertise of some of the world's foremost neuroscientists in the field of learning and memory research The volume provides a broad coverage of contemporary research and thinking in this field focusing both on well established topics such as the medial temporal lobe memory system as well as emerging areas of research such as the role of memory in decision making and the mechanisms of perceptual learning Key intersecting themes include the molecular and cellular mechanisms of memory formation the multiplicity of memory systems in the brain and the way in which technological innovation is driving discovery Unusually for a volume of this kind this volume brings together research from both humans and animals often relatively separate areas of discourse to give a more comprehensive and integrated view of the field The book will be of interest to both established researchers who wish to broaden their knowledge of topics outside of their specific areas of expertise and for students who need a resource to help them make sense of the vast scientific literature on this subject
