practice **Tacrolimus Ointment** T. Ruzicka, S. Reitamo, 2003-10-14 Therapeutic breakthroughs in medicine are usually accompanied by a wealth of data. Often they result in a change of disease treatment paradigms. Tacrolimus ointment is the first in the new class of steroid free Topical Immunomodulators (TIMs) and as such represents the first true breakthrough since the introduction of topical steroids more than 50 years ago for the treatment of T cell mediated inflammatory skin diseases such as atopic dermatitis. This book gives an easy to read overview of the discovery and the development of Tacrolimus ointment for the treatment of atopic dermatitis. Summarising the largest clinical trial program ever conducted in dermatology for a new treatment with more than 13000 patients it offers a detailed insight into the efficacy and safety profile of Tacrolimus ointment. Based on this large body of data and extensive personal experience the authors offer practical and hands on guidance for the physician as to when and how to use Tacrolimus ointment in daily practice ***T Lymphocytes Subpopulations in Immunotoxicology*** Ian Kimber, Mary Jane K. Selgrade, 1998-08-17 T Lymphocyte Subpopulations in Immunotoxicology Edited by Ian Kimber ZENECA Pharmaceuticals Central Toxicology Laboratory Macclesfield Cheshire UK and Mary Jane K Selgrade US Environmental Protection Agency National Health and Environmental Effects Research Laboratory NC USA Immunotoxicology is a diverse discipline that embraces the investigation of the adverse health effects that may result from the interaction of xenobiotics with the immune system. T lymphocytes orchestrate adaptive immune responses and are of central importance in the consideration of immunotoxicity. These cells and or the tissue responsible for their functional maturation the thymus have been implicated as the primary or secondary targets for chemical insult. Moreover T lymphocytes play pivotal roles in the induction and elicitation of chemical and protein allergy and in the pathogenesis of autoimmune disease. Classically T lymphocytes have been divided into two main populations CD4 helper T cells and CD8 suppressor cytotoxic T cells. It is now apparent that there exists within both populations considerable functional heterogeneity characterized usually by variable cytokine secretion patterns. Two major subpopulations of T helper Th cells have been identified and designated Th1 and Th2 with similar but less well characterized sub types of cytotoxic Tc cells having been described also. The discovery of functional subpopulations of Th and Tc cells has profoundly influenced our view of the immune response and in particular our appreciation of the way in which the immune system can tailor responses to meet challenges of different types. This has also translated into a much more detailed understanding of certain immunopathologic processes and the role of T lymphocytes in the development of allergic autoimmune and inflammatory diseases. This book explores the role of T lymphocyte subpopulations in the development and expression of immunotoxic effects. Constituent chapters reveal that a consideration of the impact of chemicals on these diverse T cell populations and the polarization of T cell responses has already contributed greatly to our understanding of the mechanisms underlying immunotoxicity including immune suppression and allergic and autoimmune responses ***Immune Mechanisms in Allergic Contact Dermatitis*** Andrea Cavani, 2005-01-10 This book presents an overview of the pathogenesis of allergic contact

dermatitis ACD It explains the characterization of T cell subsets which modulate immune reaction to chemicals and may represent a formidable tool for new therapeutic approaches to ACD and other T cell mediated skin disorders
