Frontiers in Turbulence and Coherent Structures J. P. Denier, Jorgen S. Frederiksen, 2007 The Chickasaw Nation an American Indian nation headquartered in southeastern Oklahoma entered into a period of substantial growth in the late 1980s Following its successful reorganization and expansion which was enabled by federal policies for tribal self determination the Nation pursued gaming and other industries to affect economic growth From 1987 to 2009 the Nation s budget increased exponentially as tribal investments produced increasingly large revenues for a growing Chickasaw population Coincident to this growth the Chickasaw Nation began acquiring and creating museums and heritage properties to interpret their own history heritage and culture through diverse exhibitionary representations By 2009 the Chickasaw Nation directed representation of itself at five museum and heritage properties throughout its historic boundaries Josh Gorman examines the history of these sites and argues that the Chickasaw Nation is using museums and heritage sites as places to define itself as a coherent and legitimate contemporary Indian nation In doing so they are necessarily engaging with the shifting historiographical paradigms as well as changing articulations of how museums function and what they represent The roles of the Chickasaw Nation s museums and heritage sites in defining and creating discursive representations of sovereignty are examined within their historicized local contexts The work describes the museum exhibitions dialogue with the historiography of the Chickasaw Nation the literature of new museum studies and the indigenous exhibitionary grammars emerging from indigenous museums throughout the United States and the world

Models for Tropical Climate Dynamics Boualem Khouider, 2019-07-03 This book is a survey of the research work done by the author over the last 15 years in collaboration with various eminent mathematicians and climate scientists on the subject of tropical convection and convectively coupled waves In the areas of climate modelling and climate change science tropical dynamics and tropical rainfall are among the biggest uncertainties of future projections This not only puts at risk billions of human beings who populate the tropical continents but it is also of central importance for climate predictions on the global scale This book aims to introduce the non expert readers in mathematics and theoretical physics to this fascinating topic in order to attract interest into this difficult and exciting research area The general theme revolves around the use of new deterministic and stochastic multi cloud models for tropical convection and convectively coupled waves It draws modelling ideas from various areas of mathematics and physics and used in conjunction with state of the art satellite and in situ observations and detailed numerical simulations After a review of preliminary material on tropical dynamics and moist thermodynamics including recent discoveries based on satellite observations as well as Markov chains the book immerses the reader into the area of models for convection and tropical waves It begins with basic concepts of linear stability analysis and ends with the use of these models to improve the state of the art global climate models The book also contains a fair amount of exercises that makes it suitable as a textbook complement on the subject
