Castaway Tales

Christopher Palmer, 2016-05-10 A wide ranging and appreciative literary history of the castaway tale from Defoe to the present Ever since Robinson Crusoe washed ashore the castaway story has survived and prospered inspiring a multitude of writers of adventure fiction to imitate and adapt its mythic elements In his brilliant critical study of this popular genre Christopher Palmer traces the castaway tales history and changes through periods of settlement violence and reconciliation and across genres and languages Showing how subsequent authors have parodied or inverted the castaway tale Palmer concentrates on the period following H G Wells's The Island of Dr Moreau These much darker visions are seen in later novels

including William Golding's *Lord of the Flies*, J. G. Ballard's *Concrete Island* and Iain Banks's *The Wasp Factory*. In these and other variations the castaway becomes a cannibal, the castaway's island is relocated to center of London, female castaways mock the traditional masculinity of the original Crusoe, or Friday ceases to be a biddable servant. By the mid twentieth century the castaway tale has plunged into violence and madness only to see it return in young adult novels such as Scott O' Dell's *Island of the Blue Dolphins* and Terry Pratchett's *Nation* to the buoyancy and optimism of the original. The result is a fascinating series of revisions of violence and pessimism but also reconciliation.

Bacterial Diseases of Rice and Their Management Deepti Srivastava, Md. Shamim, Malik Mobeen Ahmad, K. N. Singh, 2023-05-05 Rice is a major staple food and a source of nutrition for over 3.5 billion people worldwide. It is however susceptible to a number of bacterial diseases that decrease its yield and quality. This book covers the bacterial diseases of rice and their management focusing on sustainable management methods that involve biological control, conventional breeding and molecular methods. It covers the biology of rice bacterial blight, pathogens, virulence determinants and host defense factors of bacterial blight, pathogen-rice interactions. Different resistance rice cultivars, their resistance loci and quantitative trait loci mapping in the important rice cultivars are also discussed. The book presents biological studies of the major rice bacterial diseases: rice bacterial brown stripe disease, bacterial leaf streak disease, rice bacterial panicle blight disease, rice bacterial foot rot, sheath brown rot disease and presents comparative analyses of conventional breeding and molecular management approaches along with examples.

Site-directed insertion of transgenes Sylvaine Renault, Philippe Duchateau, 2012-07-30 The post genomic era has brought new challenges and opportunities in all fields of the biology. In this context several genome engineering technologies have emerged that will help deciphering genes function by as well as improve gene therapy strategies. Genomic modifications such as knock in, knock out, knock down, sequence replacement or modification can today be routinely performed. However in front of this large palette of methodologies scientists may experience difficulties to gather useful information scattered within the literature. This book aims to present the state of this field from basic mechanisms of site directed modifications to their applications in a wide range of organisms such as bacteria, yeast, plants, insects, mammals. It will discuss the problems encountered when using the random integration strategy and present the recent advances made in targeted genome modification. Technologies based on Zinc Finger nucleases, Meganucleases, TALEN, CRE and FLP recombinase, C31 integrase, transposases and resolvases are fully detailed with their strengths and weaknesses. All these information s will help students and experienced researchers to understand and choose the best technology for their own purposes.

Bacterial Type III Protein Secretion Systems Samuel Wagner, Jorge E. Galan, 2020-08-14 One of the most exciting developments in the field of bacterial pathogenesis in recent years is the discovery that many pathogens utilize complex nanomachines to deliver bacterially encoded effector proteins into eukaryotic and prokaryotic target cells to modulate a variety of cellular functions for the pathogen's benefit. These protein delivery

machines include the type III secretion system T3SS which is widespread in nature and encoded not only by bacteria pathogenic to vertebrates or plants but also by bacteria that are symbiotic to plants or insects. Because they are essential virulence factors for many important human pathogens, these systems are emerging as a prime target for the development of new generation anti-infective drugs. This book reviews our current understanding of these intriguing injection machines as well as of the closely related T3SS that serves in flagella assembly. Individual chapters focus on regulation, assembly, structure, and function of the type III secretion machine and on the evolution of the secreted effector proteins. Given its scope, this book will appeal to a broad readership including researchers and teachers in the fields of infectious diseases, host-pathogen interactions, plant and animal pathogenesis, and symbiosis.
