*Biology and Management of the Formosan Subterranean Termite and Related Species* Nan-Yao Su, Chow-Yang Lee, 2023-12-22. The Formosan subterranean termite *Coptotermes formosanus* is the most destructive and invasive termite species globally. It is also the only termite species listed in the world's 100 worst invasive alien species of the Global Invasive Species Database. Annually, its infestation costs more than 4 billion in control and damage repairs in the USA alone. This book is the first comprehensive resource drawing on all the literature on *C. formosanus* since Tokuichi Shiraki first described the species in 1909. The book covers the worldwide distribution of this species, its biogeography, and how it has dispersed from its native range in southern China and Taiwan to different parts of the world. It describes its present taxonomic status and discusses the species' biology, ecology, foraging behavior, physiology, chemical ecology, and its association with symbionts. From a practical standpoint, the authors address all of the various management options for this species, such as baits, soil termiticides, wood preservatives, inspection and detection technologies, and Integrated Pest Management (IPM) approaches. Lastly, there are chapters dedicated to another important destructive species, *Coptotermes gestroi*, the Asian subterranean termite, and the recently discovered *C. formosanus* *C. gestroi* hybrids. This important book is an essential and valuable reference for researchers, graduate students, pest management professionals, chemical manufacturer personnel, building and property managers, and others. It provides readers with a comprehensive understanding of the biology and management of the Formosan subterranean termite and the Asian subterranean termite.

**Termites of the Gods** Siyakha Mguni, 2015-03-01. Siyakha Mguni's personal journey over many years to discover the significance of a hitherto enigmatic theme in San rock paintings known as formlings. In *Termites of the Gods*, Siyakha Mguni narrates his personal journey over many years to discover the significance of a hitherto enigmatic theme in San rock paintings known as formlings. Formlings are a painting category found across the southern African region, including South Africa, Namibia, and Zimbabwe, with its densest concentration in the Matopo Hills, Zimbabwe. Generations of archaeologists and anthropologists have wrestled with the meaning of this painting theme in San cosmology without reaching consensus or a plausible explanation. Drawing on San ethnography published over the past 150 years, Mguni argues that formlings are in fact representations of flying termites and their underground nests and are associated with botanical subjects and a range of larger animals considered by the San to have great power and spiritual significance. This book fills a gap in rock art studies around the interpretation and meaning of formlings. It offers an innovative methodological approach for understanding subject matter in San rock art that is not easily recognisable and will be an invaluable reference book to students and scholars in rock art studies and archaeology.
