The Analysis Of Sensations And The Relation Of The Physical To The Psychical:

The Analysis of Sensations, and the Relation of the Physical to the Psychical Ernst Mach, 1914 Physicist and philosopher Ernst Mach investigates the physical sensations of sight sound motion and the perceptions of space and time Mach is frank about his book incorporating both scientific and philosophical ideas While acknowledging his investigations were on the border of what science had helped humans comprehend he defends his work by stating that the manifold sensations a person experiences each day are the result of a complex interplay of biology and physics As such philosophical enquiries on the sensory experience are merited for science alone cannot encompass or quantify the various sensations with a view to explaining their precise effects on the human mind and its thought processes An example investigated by Mach is that of time how certain sensory experiences appear to make time pass slower or faster Often vivid experiences a shocking sight produce the sensation of time slowing why this occurs and how it affects the mind is discussed at length Though Mach met with both praise and opposition with the successive editions of this work he is cheerful at having aroused such debate he had appropriated aspects of science to philosophic ends

Excerpt from *The Analysis of Sensations and the Relation of the Physical to the Psychical* I am aware of course that I have succeeded in contributing but little to the attainment of this end The very fact that my investigations have been carried on not in the way of a profession but only at odd moments and frequently only after long interruptions must detract considerably from the value of my scattered publications or perhaps even lay me open to the silent reproach of desultoriness So much the more therefore am I under especial obligations to those investigators such as E Hering V Hensen W Preyer and others who have directed attention either to the matter of my writings or to my methodological expositions The present compendious and Supplementary presentation of my views will perhaps place my attitude in a somewhat more favorable light for it will be seen that in all cases I have had in mind the same problem no matter how varied or numerous were the single facts investigated Although I can lay no claim whatever to the title of physiologist and still less to that of philosopher yet I venture to hope that the work thus undertaken purely from a strong desire for self enlightenment by a physicist unconstrained by the conventional barriers of the specialist may not be entirely without value for others also even though I may not be everywhere in the right About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections
