**Fast Facts: Systemic Mastocytosis** Deepti H. Radia, Cem Akin, 2023-04-04 Systemic mastocytosis SM is a heterogeneous group of rare hematologic neoplasms that are characterized by clonal proliferation of mast cells in the bone marrow and extracutaneous organs which can cause symptoms due to mast cell mediator release and end organ damage due to mast cell infiltration Mastocytosis is classified as a distinct entity by the WHO because of its unique clinicopathological features Over 95% of patients harbor the somatic KIT driver mutation D816V This book focuses on the diagnosis of SM with up to date practical guidance on the management of patients with SM who may present to a variety of healthcare providers on their diagnostic journey It will be invaluable to clinicians medical students nurses pharmacists and scientists in understanding the clinical diagnostic and management challenges associated with SM Los Angeles County, Some Facts and Figures, 1926 Los Angeles Chamber of Commerce, 1926

**Advances in Superconductivity VIII** Hisao Hayakawa, Youichi Enomoto, 2013-11-11 Since the discovery of superconductivity with transition temperatures above 77 K concentrated research activities toward the exploration of practical applications of these materials have been carried out Currently a remarkable improvement in superconducting properties has been achieved due to the fine optimization of fabrication processes and this has attracted industrial interest for future applications In the case of NdBaCuO materials a new pinning mechanism was found which enhances the critical current under applied magnetic fields In single crystals of these materials oxygen control results in an increase in the growth rate The metalorganic chemical vapor deposition MOCVD film quality has been improved by using a new liquid raw material Simultaneously real demands from the viewpoint of the market start to be a motivation force especially in electronics application where some products are already being sold At the same time interesting physical properties have been obtained from a new superconducting single crystal which has a layered perovskite structure without copper In addition various precision measurement techniques have confirmed the d wave mechanism and the existence of intrinsic Josephson junctions in single crystals These new phenomena challenge the existing theoretical models but also open the way for new applications These significant areas of progress in materials science have led high T<sub>c</sub> superconductivity research into the next phase of activity while fundamental research continues to be very important I sincerely hope that this volume will give further impetus to this development
