Declarative Agent Languages and Technologies Joao Leite, Andrea Omicini, Leon Sterling, Paolo Torroni, 2004-07-22 Agent metaphors and technologies are increasingly adopted to harness and govern the complexity of today's systems. As a consequence, the growing complexity of agent systems calls for models and technologies that promote system predictability and enable feature discovery and verification. Formal methods and declarative technologies have recently attracted a growing interest as a means to address such issues. The aim of the DALT 2003 workshop was two fold. On the one hand we wanted to foster a discussion forum to export such techniques into the broader community of agent researchers and practitioners. On the other hand we wanted to bring in the issues of real world complex and possibly large scale agent system design in the perspective of formal methods and declarative technologies. Thanks to the very high quality of our program committee we managed to put together a rich program including three technical sessions and two panel sessions.

The Use of Declarative Programming for Agent Oriented Software Engineering moderated by Leon Sterling and Andrea Omicini and Declarative and Logic Based Technology for Agent Reasoning and Interactions organized and moderated by Rafael Bordini and Wiebe van der Hoek with the participation of five invited panelists. This book contains the revised and extended versions of the papers presented at the workshop as well as three invited contributions by leading researchers of the field. It is composed of three parts: i) software engineering and multi agent system prototyping ii) agent reasoning BDI logics and extensions and iii) social aspects of multi agent systems.

Special Groups M. A. Dickmann,Francisco Miraglia,2000 This monograph presents a

systematic study of Special Groups a first order universal existential axiomatization of the theory of quadratic forms which comprises the usual theory over fields of characteristic different from 2 and is dual to the theory of abstract order spaces The heart of our theory begins in Chapter 4 with the result that Boolean algebras have a natural structure of reduced special group More deeply every such group is canonically and functorially embedded in a certain Boolean algebra its Boolean hull This hull contains a wealth of information about the structure of the given special group and much of the later work consists in unveiling it Thus in Chapter 7 we introduce two series of invariants living in the Boolean hull which characterize the isometry of forms in any reduced special group While the multiplicative series expressed in terms of meet and symmetric difference constitutes a Boolean version of the Stiefel Whitney invariants the additive series expressed in terms of meet and join which we call Horn Tarski invariants does not have a known analog in the field case however the latter have a considerably more regular behaviour We give explicit formulas connecting both series and compute explicitly the invariants for Pfister forms and their linear combinations In Chapter 9 we combine Boolean theoretic methods with techniques from Galois cohomology and a result of Voevodsky to obtain an affirmative solution to a long standing conjecture of Marshall concerning quadratic forms over formally real Pythagorean fields Boolean methods are put to work in Chapter 10 to obtain information about categories of special groups reduced or not And again in Chapter 11 to initiate the model theoretic study of the first order theory of reduced special groups where amongst other things we determine its model companion The first order approach is also present in the study of some outstanding classes of morphisms carried out in Chapter 5 e g the pure embeddings of special groups Chapter 6 is devoted to the study of special groups of continuous functions

in supersymmetric field theories or superstring theory with results from lattice models An invaluable source of topical information for every scientist working in elementary particle theory The Elementary School Library Collection ,1998

Free Ideal Rings and Localization in General Rings P. M. Cohn,2006-06-08 Proving that a polynomial ring in one variable over a field is a principal ideal domain can be done by means of the Euclidean algorithm but this does not extend to more variables However if the variables are not allowed to commute giving a free associative algebra then there is a generalization the weak algorithm which can be used to prove that all one sided ideals are free This book presents the theory of free ideal rings first in detail Particular emphasis is placed on rings with a weak algorithm exemplified by free associative algebras There is also a full account of localization which is treated for general rings but the features arising in firs are given special attention Each section has a number of exercises including some open problems and each chapter ends in a historical note

Symbolic Dynamical Systems and C*-Algebras Kengo Matsumoto,2025-02-06 This book presents the interplay between topological Markov shifts and Cuntz Krieger algebras by providing notations techniques and ideas in detail The main goal of this book is to provide a detailed proof of a classification theorem for continuous orbit equivalence of one sided topological Markov shifts The continuous orbit equivalence of one sided topological Markov shifts is classified in terms of several different mathematical objects the tale groupoids the actions of the continuous full groups on the Markov shifts the algebraic type of continuous full groups the Cuntz Krieger algebras and the K theory dates of the Cuntz Krieger algebras This classification result shows that topological Markov shifts have deep connections with not only operator algebras but also groupoid theory infinite non amenable groups group actions graph theory linear algebras K theory and so on By using this classification result the complete classification of flow equivalence in two sided topological Markov shifts is described in terms of Cuntz Krieger algebras The author will also study the relationship between the topological conjugacy of topological Markov shifts and the gauge actions of Cuntz Krieger algebras
