Authorization United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science, Technology, and Space, 1983 **Fundamentals of Materials Science** Zhengming Sun, Peigen Zhang, Wei Liu, Wei He, 2025-07-19 This book introduces the fundamentals of materials science and is intended to be used by undergraduate students in materials-related majors, mainly in China. The book focusses on the basic theories of the three primary types of solid-state materials: metals, ceramics, and polymers and composites, and emphasizes the relationships between the structures and properties of materials. In addition, it presents the crystal structure, imperfections, microstructure, material processing, and performance of the materials from the electronic and atomic levels. The physicochemical processes in materials, such as diffusion, phase diagram, and phase transition, are also explained from the thermodynamic point of view. To highlight the fundamental role of materials science to modern technologies and the development of society, the materials science-related content about Nobel Prizes is introduced in this book. Exercises and questions are included at the end of each chapter for students to practice and gain hands-on experience. Given its scope, this book is of interest to undergraduate students majoring in materials science and engineering and other related areas, and is also beneficial for researchers, graduates, and engineers with interdisciplinary backgrounds. *Polymer Science: A Comprehensive Reference*, 2012-12-05 The progress in polymer science is revealed in the chapters of *Polymer Science: A Comprehensive Reference* Ten Volume Set. In Volume 1, this is reflected in the improved understanding of the properties of polymers in solution, in bulk, and in confined situations, such as in thin films. Volume 2 addresses new characterization techniques, such as high-resolution optical microscopy, scanning probe microscopy, and other procedures for surface and interface characterization. Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture, the development of metallocene and post-metallocene catalysis for olefin polymerization, new ionic polymerization procedures, and atom transfer radical polymerization, nitroxide-mediated polymerization, and reversible addition-fragmentation chain transfer systems as the most often used controlled/living radical polymerization methods.

Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects with a precision available only recently An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7 It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films inorganic organic hybrids or nanofibers Volume 8 expands these concepts focusing on applications in advanced technologies e g in electronic industry and centers on combination with top down approach and functional properties like conductivity Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9 It deals with various aspects of polymers in biology and medicine including the response of living cells and tissue to the contact with biofunctional particles and surfaces The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers They discuss new technologies needed for a sustainable economy in our world of limited resources Provides broad and in depth coverage of all aspects of polymer science from synthesis polymerization properties and characterization methods and techniques to nanostructures sustainability and energy and biomedical uses of polymers Provides a definitive source for those entering or researching in this area by integrating the multidisciplinary aspects of the science into one unique up to date reference work Electronic version has complete cross referencing and multi media components Volume editors are world experts in their field including a Nobel Prize winner

Civilization and the Culture of Science Stephen Gaukroger, 2020-02-19 How did science come to have such a central place in Western culture How did cognitive values and subsequently moral political and social ones come to be modelled around scientific values In *Civilization and the Culture of Science* Stephen Gaukroger explores how these values were shaped and how they began in turn to shape those of society The core nineteenth and twentieth century development is that in which science comes to take centre stage in determining ideas of civilization displacing Christianity in this role Christianity had provided a unifying thread in the study of the world however and science had to match this which it did through the project of the unity of the sciences The standing of science came to rest or fall on this question which the book sets out to show in detail is essentially ideological not something that arose from developments within the sciences which remained pluralistic and modular A crucial ingredient in this process was a fundamental rethinking of the relations between science and ethics economics philosophy and engineering In his engaging description of this transition to a scientific

New Evolutionary Social Science Heinz-Jurgen Niedenzu,Tamas Meleghy,Peter Meyer,2015-11-17 Social scientists have long declared their autonomy from the natural sciences and in doing so have tended to neglect important biological constraints on human nature Many sociological theories have suggested a nearly complete malleability of patterns of social life The New Evolutionary Social Science challenges this

view by building on Stephen K Sanderson's Darwinian conflict theory which sets out to synthesise sociological theories with key findings from biology into an overarching scientific paradigm. Configuring and expanding this groundbreaking theory, the contributors to this volume are well known European and American experts in evolutionary science. The New Evolutionary Social Science develops a new basis for understanding social change and the world's future through a better integration of the natural and social sciences. Handbook of Food Analysis - Two Volume Set Leo M.L. Nollet, Fidel Toldra, 2015-06-10 Updated to reflect changes in the industry during the last ten years. Nowotny, 1995-01-13 This collection of papers arose from the Proceedings of the International Workshop on Interfaces of Ceramic Materials held in Australia 1993 and is a continuation of the previous book published under the same title. The objective of the Workshop was to discuss research progress on the chemistry of ceramic interfaces and related industrial aspects. Due to the multidisciplinary character of ceramic interfaces, the book contains articles covering several areas of expertise including ceramics, surface science, solid state electrochemistry, metallurgy and high temperature chemistry. Some technical papers are also included in this volume. Scientists and engineers working in these areas as well as students in materials science and engineering will find this book of particular significance. Frontiers in Materials Science B. Raj, 2005 This volume presents contributions by a galaxy of eminent scientists and technologists from the world over in a broad spectrum of areas in materials science providing a global perspective on complex issues of current concern and the direction of research in these areas.
