Strategic Environmental Assessment In Transport And Land Use Planning:

Strategic Environmental Assessment in Transport and Land Use Planning Thomas B. Fischer, 2023-04-28

Assessing the full scale of environmental impacts is essential for effective planning of transport and land use. This is an analysis of transport and land use planning using strategic environmental assessment (SEA). It establishes the effectiveness of SEA through comparative studies of practice in three countries: Britain, the Netherlands, and Germany. The author shows that use of SEA is widespread but far from systematic. He demonstrates the advantages of adopting a systematic application of a comprehensive form of SEA derived from all the major current approaches. Only once this approach is fully understood and systematically applied will all the full benefits be achieved and environmental impacts be minimized. *Strategic*

Environmental Assessment and Land Use Planning Michael Short, Mark Baker, Jeremy Carter, Stephen Jay, Carys

Jones, 2013-06-17. A wonderfully international and up to date perspective on strategic environmental assessment of land use plans by leading experts in the field. Strategic Environmental Assessment and Land Use Planning covers not only how much such SEAs are carried out and in what context but whether they are effective and why. It provides invaluable insights for practitioners and researchers in this rapidly evolving field. Riki Therivel, author of Strategic Environmental Assessment in Action. Strategic Environmental Assessment and Land Use Planning provides an authoritative international evaluation of the SEA of land use plans. The editors place the SEA of land use plans in context and uniquely qualified contributors then evaluate systems in Canada, Denmark, Germany, Hong Kong, Hungary, Ireland, The Netherlands, New Zealand, Portugal, South Africa, Sweden, the United Kingdom, the United States, and the World Bank. These chapters provide a description of the context in each country, a case study of the use of SEA in land use planning, and an evaluation of each SEA system against a set of generic criteria specially designed to analyse different aspects of SEA. The contributors critically review each SEA system, SEA process, and SEA outcome and conclude by summarizing their findings. The editors draw the various national perspectives together in a final chapter and derive widely applicable conclusions about SEA and land use planning. This book is a core text for all students in environmental assessment, land use planning, environmental science, environmental management, development studies, geography, landscape design, and law and engineering. It is also essential reading for all governments and environmental regulators, academics, researchers, and environmental and planning consultants worldwide who are involved in SEA research, practice, and training.
