Synthetic Surfactant Vesicles L F Uchegbu, 2000-02-23 The self assembly of synthetic surfactants and other non phospholipids into vesicles was first studied in the 1970s by cosmetic scientists when non ionic surfactant vesicles or niosomes were reported Since this time a large body of research has sought to define these systems primarily as drug carriers and also as features of interest to the colloid scientist Synthetic surfactant vesicles as the name implies may also be fabricated from a vast array of amphiphiles including a number of pharmaceutically acceptable materials They may also be prepared in a variety of shapes and sizes and have a number of applications This book is designed to serve as an introductory text to the science of non phospholipid vesicles and will be of use to colloid drug delivery cosmetic and materials scientists It aims to acquaint the reader with the physicochemistry and biomedical applications of these synthetic surfactant non phospholipid vesicles Part one introduces the reader to physicochemical aspects of these synthetic surfactant dispersions and explores the diversity of materials that may be used to formulate vesicles Part two details methods of vesicle preparation and the application of synthetic surfactant vesicles in a variety of fields ranging from anti cancer chemotherapy to immunization

Bizzigotti,1982 Reactions And Synthesis In Surfactant Systems John Texter,2001-06-26 This work offers a comprehensive review of surfactant systems in organic inorganic colloidal surface and materials chemistry It provides practical applications to reaction chemistry organic and inorganic particle formation synthesis and processing molecular recognition and surfactant templating It also allows closer collaboration between synthetic and physical practitioners in developing new materials and devices Surfactant Systems D. Attwood,2012-12-06 It is now twelve years since *Solubilization by Surface Active Agents* appeared Since the publication of that monograph the subject has expanded rapidly as the unique potential of surfactants has become known to a wider circle of scientists In a recent review Menger *Accounts of Chemical Research* 12 1979 111 estimated that since 1970 there have been over 2800 publications on micelles and micellization alone The topic of catalysis in micellar media was in an early stage of development in 1968 but the growth in this subject has given rise to an excellent textbook by Fendler and Fendler We have felt for some time that a revision of *Solubilization by Surface Active Agents* was overdue The book has been out of print for some time Owing to pressure of other work Professor P H Elworthy and Dr C B Macfarlane were unable to undertake the work of revision but while working together on an undergraduate textbook the present authors decided to set to work realizing both the impossibility of producing a comprehensive textbook and the need to alter the scope of the book Micellar solubilization occurs over a relatively small surfactant concentration range because of this and because the phenomenon is never observed in isolation we have extended the text to include surface activity emulsions and suspensions and as our emphasis is on formulation of medicinal products to the of the toxicology of surface active agents **Polymer Gels and Networks** Yoshihito Osada,Alexei Khokhlov,2001-12-12 This text offers an in depth look at the properties thermodynamic formation structure latest trends and scientific application of bio and synthetic polymer gels *Nanoparticulates As Drug Carriers* Vladimir P Torchilin,2006-09-29 Written by key experts in the field of nanomedicine this book provides a broad introduction to the important field of nanomedicine and application of nanotechnology for drug delivery It covers up to date information regarding various nanoparticulate drug delivery systems describes the various opportunities for the application of nanoparticulate drug carriers in different areas of clinical medicine and analyzes already available information on their clinical applications This book can be used as an advanced textbook by graduate students and young scientists and clinicians at the early stages of their career It is also suitable for non experts from related areas of chemistry biochemistry molecular

biology biomedical engineering physiology experimental and clinical medicine and pharmaceutical sciences who are interested in general problems of drug delivery and drug targeting as well as in more specialized topics of using nanoparticulate mediated drug delivery approaches in the individual areas of clinical medicine Prof Torchilin is an expert in Nanomedicine and a recipient of numerous awards including the Lenin Prize in Science Technology of the former USSR membership in the European Academy of Sciences and AAPS Research Achievement Award in Pharmaceutics and Drug Delivery He served as an Associate Professor of Radiology at Harvard Medical School before joining Northeastern University as the Chairman of the Department of Pharmaceutical Sciences a Surfactant Science and Technology Drew Myers,2020-06-23 A solid introduction to the field of surfactant science this new edition provides updated information about surfactant uses structures and preparation as well as seven new chapters expanding on technology applications Offers a comprehensive introduction and reference of the science and technology of surface active materials Elaborates more fully than prior editions aspects of surfactant crystal structure as well as their effects on applications Adds more information on new classes and applications of natural surfactants in light of environmental consequences of surfactant use
