Chemistry of Nucleosides and Nucleotides L.B. Townsend, 2013-03-07 The present volume is the first of a projected four volume treatise This volume contains the following chapters Synthesis and Reaction of Pyrimidine Nucleosides Synthesis and Properties of Purine Nucleosides and Nucleotides and Synthesis and Properties of Oligonucleotides These three chapters were selected for inclusion in Volume I because the areas have provided the basis and impetus for the initiation and development of the other areas of research which will be described in subsequent volumes Each chapter is rather comprehensive in nature and should provide a ready reference source for not only the novice but also the experienced investigator or researcher The chapters have been prepared by authors with considerable experience in each particular area of research and this has resulted in a lucid presentation of each well defined area These volumes were designed with medicinal chemists medicinal organic chemists organic chemists carbohydrate chemists physical chemists and biological chemists in mind However because of the tremendous recent interest in this research area owing to the biological and chemotherapeutic evaluation of nucleosides and nucleotides as anticancer antiviral and antiparasitic agents these volumes should also be valuable additions to the libraries of virologists biochemical pharmacologists oncologists and pharmacologists We would like to thank the authors for their enthusiasm and help in making these volumes available to the scientific community

Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular, critical, in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.
