System At Risk A The Economics Of Transportation:

A System at Risk Harold Worrall, 2005-10-14 *A System at Risk* is a comprehensive analysis of the transportation dilemma in the United States that continues to affect the economic competitiveness and quality of life in America. Written for the layman and the professional alike, it describes an impending crisis in the surface transportation system which is the foundation of economic vitality. Dr. Harold Worrall exposes the underlying relationship between transportation and economics by reviewing public economic theory and choice. Incremental policy making has done little to reduce automobile and truck traffic growth. Further, an analysis of traffic congestion demonstrates a geometric growth pattern for congestion even as traffic grows linearly. Dr. Worrall reviews the European Union and China for the manner in which they have addressed similar challenges. These competing economies are shown to have a strategy for dealing with surface transportation and are in stark contrast to that of the United States. Transportation funding is shown to be inadequate in volume and method of application as traffic volumes continue to grow. Dr. Worrall shows that there is a demonstrated need for transportation policies that consider a relationship between the price and consumption of transportation.

Economic Impacts of Intelligent Transportation Systems E. Bekiaris, Y. J. Nakanishi, 2004-07-24 There are unique complexities associated with the economic valuation of Intelligent Transportation Systems (ITS) and telematics. Traditional methods of quantitative analysis may not be appropriate in accurately and reliably assessing the economic impacts of these technologies. Although advanced transportation and related technologies are being planned and deployed at an increasingly rapid pace, many of the technologies are still relatively new and their use may not be widespread. Much of the initial information and statistics gathered have been anecdotal and have focused more on benefits rather than costs. Therefore, difficulties arise due to the lack of historical data and lessons learned from which to draw upon. In addition, compared with traditional transportation infrastructure, ITS technologies have different life cycles, cost structures, and a number of interrelated elements. This book addresses these concerns and proposes new economic assessment techniques as well as modifications to existing ones. Included are case studies from a multitude of North American, European, and Asian nations and major metropolitan areas covering a wide range of ITS technologies, including freeway management, electronic toll collection, advanced driver assistance systems, and traveller information systems.

of conference papers I have seen in the past 25 years. These are artfully woven together into three primary areas: the first focuses on the role of knowledge and innovation in entrepreneurship; the second incorporates the institutional environment while the third looks at the international context. I recommend this collection to academics, students and all who are interested in the role of creativity and innovation in entrepreneurial development. Not only are these the very best researchers in the field but the materials are presented in a clear and concise manner making it an outstanding base for advanced courses in this area. This work combines some of the best writings by top notch authors sharing the sharpest insight into the complex area of the role of human capital in structuring agglomerative advantages. I take my hat off to the fine editorial work represented in this volume.

Kingsley E Haynes, George Mason University, US

The book provides a remarkable contribution on the role of human capital as major creator of knowledge interpreted as abilities, capabilities, methods, creativity and persistency in identifying and solving problems by collecting, selecting, interpreting and applying existing knowledge and information; the laws of increasing returns to human capital among which are urban agglomerations as magnets which attract persons who embody knowledge; are conceptually searched and empirically verified; the book answers questions such as: Why do highly educated people i.e. the carriers of human capital tend to concentrate in large agglomerations? What are the agglomerative forces and how does this agglomeration of human capital impact different types of economic activities and in particular their location behaviour? Important normative implications are thus derived from such a collected effort.

Roberta Capello, Politecnico di Milano, Italy

The *Regional Economics of Knowledge and Talent* edited by Charlie Karlsson, Björn Johansson and Roger R. Stough brings together a wide range of cutting edge studies and research on the role of talent in regional development. It is an important addition to our understanding of how knowledge, human capital and talent shape the development of cities and regions across the globe.

Richard Florida, University of Toronto, Canada

This original and instructive new book defines and explores the concept of knowledge as the talent skills, know how and understanding embodied in individuals. The distinguished contributors advance the current research frontier in three novel directions which focus on the role of human capital and talent for creativity, entrepreneurship and regional development; the role of institutions for the behaviour of firms and entrepreneurs; and the influence of the global context on the location, export and innovation behaviour of firms in a knowledge economy. They also address critical questions that underpin the emerging knowledge economy: Why does human capital and talent tend to agglomerate in large urban regions? How does this agglomeration affect the location of different types of economic activities? How does this agglomeration affect regional growth? Presenting the state of the art in the field of knowledge economics, this book will prove a stimulating and challenging read for scholars and researchers with an interest in economics, business and management and regional and urban studies.
