Systems And Theories In Psychology:

Systems and Theories in Psychology Melvin Herman Marx, William Allen Hillix, 1979 **Systems and Theories of Psychology** James P. Chaplin, T. S. Krawiec, 1970 **Systems and Theories of Psychology** James Patrick Chaplin, T. S. Krawiec, 1946 **System Theories and A Priori Aspects of Perception** J.S. Jordan, 1998-04-21

This book takes as a starting point John Dewey's article *The Reflex Arc Concept in Psychology* in which Dewey was calling for in short the utilisation of systems theories within psychology theories of behaviour that capture its nature as a vastly complex dynamic coordination of nested coordinations. This line of research was neglected as American psychology migrated towards behaviourism where perception came to be thought of as being both a neural response to an external stimulus and a mediating neural stimulus leading to or causing a muscular response. As such perception becomes a question of how it is the perceiver creates neural representations of the physical world. Gestalt psychology on the other hand focused on perception itself utilising the term *Phenomenological Field* a term that elegantly nests perception and the organism within their respective as well as relative levels of organisation. With the development of servo mechanisms during the second world war systems theory began to take on momentum within psychology and then in the 1970s William T Powers brought the notion of servo control to perception in his book *Behavior: The Control of Perception*. Since then scientists have come to see nature not as linear chain of contingent cause effect relationships but rather as a non linear unpredictable nesting of self referential emergent coordinations best described as Chaos theory. The implications for perception are astounding while maintaining the double aspect nature of perception espoused by the Gestalt psychologists. In short system theories model perception within the context of a functioning organism so that objects of experience come to be seen as scale dependent psychophysically neutral phenomenological transformations of energy structures the dynamics of which are the result of evolution and therefore a priori to the individual case. This a priori homological unity among brain perception and world is revealed through the use of systems theories and represents the thrust of this book. All the authors are applying some sort of systems theory to the psychology of perception. However unlike Dewey we have close to a century of technology we can bring to bear upon the issue. This book should be seen as a collection of such efforts.

Social Interaction Systems Robert Freed Bales,2001-03-01 Social Interaction Systems is the culmination of a half century of work in the field of social psychology by Robert Freed Bales a pioneer at the Department of Social Relations at Harvard University Led by Talcott Parsons Gordon W Allport Henry A Murray and Clyde M Kluckhohn the Harvard Project was intended to establish an integrative framework for social psychology one based on the interaction process augmented by value content analysis Bales sees this approach as a personal involvement that goes far beyond the classical experimental approach to the study of groups Bales developed SYMLOG which stands for systematic multiple level observation of groups The SYMLOG Consulting Group approach was worldwide as well as interactive It created a data bank that made possible a search for general laws of human interaction far beyond anything thus far known In his daring search for universal features Bales redefines the fundamental boundaries of the field and in so doing establishes criteria for the behavior and values of leaders and followers Bales offers a new field theory an appreciation of the multiple contexts in which people live Bales does not aim to eradicate differences but to understand them In this sense the values inherent in any interaction situation permit the psychologist to appreciate the sources of polarization as they actually exist between conservative and liberal individualistic and authoritarian libertarian and communitarian Bales repeatedly emphasizes that the mental processes of individuals and their social interactions take place in systematic contexts which can be measured Hence they permit explanation and prediction of behavior in a more exact way than in past traditions Bales has offered a pioneering work that has the potential to move us into a new theoretical epoch no less than a new century His work holds out the promise of synthesis and support for psychologists sociologists and all who work with groups and organizations of all kinds

Sourcebook of Family Theories and Methods Pauline Boss,William J. Doherty,Ralph LaRossa,Walter R. Schumm,Suzanne K. Steinmetz,2008-11-19 Origins We call this book on theoretical orientations and methodological strategies in family studies a sourcebook because it details the social and personal roots i e sources from which these orientations and strategies flow Thus an appropriate way to preface this book is to talk first of its roots its beginnings In the mid 1980s there emerged in some quarters the sense that it was time for family studies to take stock of itself A goal was thus set to write a book that like Janus would face both backward and forward a book that would

give readers both a perspective on the past and a map for the future There were precedents for such a project The Handbook of Marriage and the Family edited by Harold Christensen and published in 1964 the two Contemporary Theories about the Family volumes edited by Wesley Burr Reuben Hill F Ivan Nye and Ira Reiss published in 1979 and the Handbook of Marriage and the Family edited by Marvin Sussman and Suzanne Steinmetz then in production Elsevier's Dictionary of Psychological Theories J.E. Roedelein, 2006-01-19 In attempting to understand and explain various behaviour events and phenomena in their field psychologists have developed and enunciated an enormous number of best guesses or theories concerning the phenomenon in question Such theories involve speculations and statements that range on a potency continuum from strong to weak The term theory itself has been conceived of in various ways in the psychological literature In the present dictionary the strategy of lumping together all the various traditional descriptive labels regarding psychologists best guesses under the single descriptive term theory has been adopted The descriptive labels of principle law theory model paradigm effect hypothesis and doctrine are attached to many of the entries and all such descriptive labels are subsumed under the umbrella term theory The title of this dictionary emphasizes the term theory implying both strong and weak best guesses and is a way of indication overall the contents of this comprehensive dictionary in a parsimonious and felicitous fashion The dictionary will contain approximately 2 000 terms covering the origination development and evolution of various psychological concepts as well as the historical definition analysis and criticisms of psychological concepts Terms and definitions are in English Contains over 2 000 terms covering the origination development and evolution of various psychological concepts Covers a wide span of theories from auditory cognitive tactile and visual to humor and imagery An essential resource for psychologists needing a single source quick reference *Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome* Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically

capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences
