T Cell Subsets Cellular Selection Commitment And Identity:

T Cell Subsets ,2004-06-26 This first thematic issue of the Advances in Immunology series highlights the remarkable new insights into the mechanisms that govern development and function of T cell lineages Recent developments in the understanding of the genetic and epigenetic mechanisms that regulate development of the two major T cell lineages will have a fundamental impact on a number of research fields immunology cell biology hematology and stem cell research All of these groups have a vested interest in comprehending issues such as stem cell self renewal progenitor plasticity lineage commitment and cellular identity Immunologists have a special interest in the mechanisms that allow selection of a T cell repertoire whose members integrate genetic information for T cell receptor co receptor and specialized immunologic function since this process lies at the core of adaptive immunity T Cell Subsets is a timely and invaluable review for immunologists cell biologists hematologists and stem cell researchers *T-Cell Subsets: Cellular Selection* ,2004

Epigenetic Regulation of Lymphocyte Development Cornelis Murre,2012-02-07 The studies described in this volume serve as a starting point to familiarize one self with the multifarious differences in epigenetic designs that orchestrate the progression of developing blood cells They also may serve as a general paradigm for the mechanisms that underpin the control of eukaryotic gene expression **Thymic Development and Selection of T Lymphocytes** Thomas Boehm,Yousuke Takahama,2013-11-06 The thymus is an evolutionarily ancient primary lymphoid organ common to all vertebrates in which T cell development takes place Failing thymus function is associated with immunodeficiency and or autoimmunity In this volume leading experts provide a comprehensive overview of recent advances in thymopoiesis research The chapters cover the development of the thymic epithelial microenvironment address the formation of a diverse and self tolerant repertoire of T cell receptors as the basis for cellular immunity discuss the mechanisms by which progenitor cells colonize the thymus and detail the molecular basis for T lineage decisions The reviews illustrate the important role of the multifaceted process of thymopoiesis for adaptive immunity Cumulated Index Medicus ,2000 **Molecular and Cellular Pathways in NK Cell**

Development Ewa Sitnicka,Yenan Bryceson,Aharon Freud,Emily Mace,2020-09-02 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org/about/contact *Transcriptional and Chromatin Regulation in Adaptive and Innate Immune Cells* Keiko Ozato,Dinah S. Singer,2020-05-22 Transcription depends on an ordered sequence of events starting with i setting of the enhancer and chromatin environment ii assembly of DNA binding and general transcription factors iii initiation elongation processing of mRNA and termination followed by iv creation

of epigenetic marks and memory formation Highlighting the importance of these activities more than 10% total genes are dedicated to regulating transcriptional mechanisms This area of research is highly active and new insights are continuously being added to our knowledge Cells of the immune system have unique features of gene regulation to support diverse tasks required for innate and adaptive immunity Innate immunity involves the recognition of external infectious and noxious agents as well as internal cancer cell components and the elimination of these agents by non specific mechanisms Adaptive immunity involves gene rearrangement to achieve highly specific T and B cell responses imparting the capability of self and non self discrimination This requires transcription and epigenetic regulation Adaptive immunity also employs epigenetic memory enabling recapitulation of prior transcription Recent advances in nuclear architecture chromatin structure and transcriptional regulation have provided new insights into immune responses The increased understanding of these molecular mechanisms is now affording opportunities to improve therapeutic strategies for various diseases
