Mamayev, 2010-05-22 *Temperature Salinity Analysis of World Ocean Waters* *Estimating Surface Currents in the Slope Water Region Between 37 and 41°N Using Satellite Feature Tracking*, 1992 *Summarization and Interpretation of Historical, Physical, Oceanographic, and Meteorological Information for the Mid-Atlantic Region* Robert G. Williams, Fredric A. Godshall, Eugene M. Rasmusson, 1977 *Oceanography and Marine Environment in the Basque Country* A. Borja, M. Collins, 2004-03-03 Against a background of extensive multi disciplinary oceanographic investigations over a number of years together with the long term establishment of a Society and Institute extensive information is available from studies undertaken in the estuarine and coastal waters of the Basque Country The present authors gained access to unpublished literature and reports which together with a synthesis of internationally refereed papers provide a series of scientific overviews of particular subject areas Teams of researchers from Basque Institutes and Universities combine to present the present state of knowledge within a global context of processes ranging from sub seabed to air sea interaction incorporating data on the associated biology including fisheries and pollutant sources and levels The latter are compared with regional national and European legislation The volume is divided into various sections Introduction Geography and Oceanography Chemical Oceanography and Water Quality Sediment Characteristics Quality and Chemistry Biomonitoring Communities and Ecology and Overall Assessment The topics covered include an historical review of marine research the impact of human activities during past centuries geology geomorphology and sediments climate and meteorology marine dynamics hydrography water mass characteristics contaminants in the waters microbiological quality sedimentological characteristics contaminants in sediments biomonitoring of heavy metals and organic components at tissue organism level and using cellular and molecular biomarkers bacterioplankton and phytoplankton communities zooplankton communities benthic communities seabirds biodiversity and conservation recovery of benthic communities the polluted systems and assessment of human impacts On the basis of these syntheses future challenges for marine research in the Basque Country are identified in terms of a Research Agenda This comprehensive text relating to estuarine coastal and oceanographic processes at wide ranging spatial and temporal scales in the southern Bay of Biscay will be of interest to researchers engineers and legislators on a regional basis and within a world wide perspective

Ocean Hydrodynamics of the Japan and East China Seas T. Ichiye, 2000-04-01 The Japan and East China seas are both marginal seas but have different oceanographical features the former is a deep basin filled with polar water but a jet like current in the upper layer and the latter is a wide continental shelf with two large rivers This book provides the first synthesis of information on the circulation hydrography coastal phenomena tides turbidity and wind waves of these seas Circulation caused by wind pressure distributions and other effects is discussed with the aid of analytical numerical and hydraulic models many of which can also be applied to problems in other seas New oceanographic techniques covered

include remote sensing drifter tracking and moored current meter system providing information useful to both researchers and students

Oceanography and Surface Layer Meteorology in the B/C Scale Gerold Siedler, 2013-10-02 Oceanography and Surface Layer in Meteorology in the B C Scale is a collection of papers that deals with the oceanic and atmospheric boundary layers in the region in or close to the Intertropical Convergence Zone ITCZ in the Eastern Atlantic Papers discuss global atmospheric circulation to improve weather prediction and climate modeling in line with the objectives of the Global Atmospheric Research Programme GARP In particular the GARP Atlantic Tropical Experiment GATE addresses the means of estimating the effects of smaller tropical weather systems on synoptic scale circulations GATE also facilitates the development of numerical modeling and prediction methods One paper compares a mathematical representation of the transport of energy by convective clouds and the cloud free environment with a relationship based on the physical structure of the cloud and environment Another paper analyzes model simulations made for various upwelling velocities rainfall events wind stress events diurnal heating cycles and internal tidal forcing using the GATE dominant scales of tropical weather systems The model simulations show that in the GATE C Scale demarcation area no single process dominates The collection will be appreciated by meteorologists environmentalists merchant marines students studying hydrology and by people working in the general earth sciences

Oceanography of Asian Marginal Seas K. Takano, 1991-06-06 This volume contains 31 papers on physical and geological oceanography marine engineering and meteorology in the Japan Sea and the East China Sea Almost all these papers were presented at the Fifth JECSS Japan and East China Seas Study Workshop held in Korea in 1989 Results of multinational cooperative studies carried out since the initiation of JECSS in 1981 are presented Authors are from China Japan Korea UK USA and USSR A wide range of subjects are covered from the viewpoint of various disciplines The status of recent research on Asian marginal seas is outlined and points at issue are defined An important aspect is the coverage of results from the USSR and China which are not normally easily accessible to scientists in other countries despite the importance of this research to the international scientific community Various subjects from estuaries to the problems related to the whole north Pacific are covered in this book and it is recommended to scientists in coastal oceanography environmental oceanography mesoscale synoptic scale oceanography and large scale oceanography

Mesoscale/Synoptic Coherent Structures in Geophysical Turbulence B.M. Jamart, J.C.J. Nihoul, 1989-07-01 The 20th Li ge Colloquium was particularly well attended and these proceedings demonstrate the significant progress achieved in understanding modelling and observing geostrophic and near geostrophic turbulence The book contains more than 50 review papers and original contributions covering most aspects of the field of mesoscale synoptic coherent structures in geophysical

oceanographic turbulence The properties of isolated vortices generation evolution decay their interactions with other vortices with larger scale currents and or with topography are investigated theoretically and by means of numerical and physical models Observation of these dynamically important features in different parts of the world ocean are reported Of particular interest will be the fourteen contributions by scientists from the USSR which emphasize the international character of the meeting The book thus constitutes a useful and complete overview of the current state of the art

Huang, 2020-08-20 This book is focused on fundamental aspects of climate variability in the ocean in particular changes of the wind driven circulation The vertical movement of isopycnal isothermal layers including their stretching and compression is called heaving and stretching A major part of climate variability in the ocean is heaving in nature Heave is primarily associated with the adiabatic motions of isopycnal layers due to change of wind stress It is rather difficult to separate the contributions from adiabatic and diabatic processes Isopycnal analysis has been widely used in climate study however it is much more accurate to study the isopycnal layers Here climate signals are examined in terms of changes of layer depth layer thickness layer temperature salinity spicity and others In addition to the traditional Theta S diagram the sigma pi potential density potential spicity diagram can also be used in analyzing water mass property distribution and climate variability In fact a radius of signal can be defined rigorously for signals in the sigma pi diagram the combination of isopycnal analysis and evaluation of radius of signal provides a powerful tool in analyzing climate variability in the world oceans *Physical*

Oceanography of Coastal and Shelf Seas B. Johns, 1983-01-01 This book provides a thorough treatment of both theoretical and observational aspects of the interaction between the sea floor and the near sea floor dynamics the effect this has on the distribution of internal and seabed stress and the relevance of the associated dynamics to sedimentation processes The theoretical work described involved both analytical and numerical modelling studies of a wide range of near shore and shelf processes These provide a valuable store of information on the interaction between the sea floor and the dynamics of the overlying water The book also includes an account of tidal analysis techniques and how these are being applied in the analysis of tidal current measurements The observational studies relate to measurements of near sea floor turbulence and sand transport in the littoral zone
