present book covers the transport properties of superconductor two dimensional electron gas Josephson junctions Starting
with the basic element a superconductor two dimensional electron gas interface phase coherent Andreev reflection in
hybrid Josephson junctions is introduced and further on multiterminal structures are discussed Special care is taken on
explaining the underlying theoretical concepts related to the transport mechanisms Employing a two dimensional electron
gas in a semiconductor as a normal conductor opens up the possibility to observe effects not found in purely metallic
junctions One example is the light sensitivity of the semiconductor which has a direct impact on the supercurrent in the
Josephson junction Many of the effects reported here rely on the fast technological progress in the epitaxial growth of III V
semiconductor heterostructures By using these layer systems fascinating quantum effects have been found Two examples out
of many are the quantized conductance in a point contact and electron optics using ballistic electron beams By combining
heterostructures with superconductors many of the effects found in purely semiconductor systems can in a sense be
transferred to the superconducting state A prominent example is the quantization of the critical current in a superconducting
