The Development Of Second Language Grammars A Generative Approach Language Acquisition And Language Disorders:

The Development of Second Language Grammars Elaine C. Klein, Gita Martohardjono, 1999 A collection of papers reflecting the shift away from characterizing second language acquisition as either having or not having access to principles and parameters of Universal Grammar and towards theories of putative L1 influence on the L2 learner **The L2 Acquisition of Tense□Aspect Morphology** M. Rafael Salaberry, Yasuhiro Shirai, 2002-10-24 The present volume provides a cross linguistic perspective on the development of tense aspect in L2 acquisition Data based studies included in this volume deal with the analysis of a wide range of target languages Chinese English Italian French Japanese and Spanish Theoretical frameworks used to evaluate the nature of the empirical evidence range from generative grammar to functional typological linguistics Several studies focus on the development of past tense markers but other issues such as the acquisition of a future marker are also addressed An introductory chapter outlines some theoretical and methodological issues that serves as relevant preliminary reading for most of the chapters included in this volume Additionally a preliminary chapter offers a substantive review of first language acquisition of tense aspect morphology The analysis of the various languages included in this volume significantly advances our understanding of this phenomenon and will serve as an important basis for future research **The Lexicon□Syntax Interface in Second Language Acquisition** Roeland van Hout, Aafke Hulk, Folkert Kuiken, Richard J. Towell, 2003-08-14 Second language acquisition has to integrate the totality of the SLA process which includes both the learning of the core syntax of a language and the learning of the lexical items that have to be incorporated into that syntax But these two domains involve different kinds of learning Syntax is learnt through a process of implementing a particular set of universal structures whereas the learning of lexis is characterised by the building up of associations or connections Yet these two systems must come together in the creation of a whole linguistic system in the mind of an individual This book is designed to state the implications of these two paradigms in as clear a way as possible through examples of the research carried out within each paradigm and to examine how they can be made to inter relate in a way which would enable us to explain better the overall process of SLA **Fossilized Second Language Grammars** Florencia Franceschina, 2005-01-01 This monograph is a theoretical and empirical investigation into the mechanisms and causes of successful and unsuccessful adult second language acquisition Couched within a generative framework the study explores how a learner's first language and the age at which they acquire their second language may contribute to the L2 knowledge that they can ultimately attain The empirical study focuses on a group of very advanced L2 speakers and through a series of tests aims to discover what underpins their near mastery of grammatical gender and other grammatical properties The book explores an account of persistent selective divergence based on the idea that child and adult learners are fundamentally similar except that in adults the L1 plays the role of a fairly rigid filter of the linguistic input The impossibility of representing

the new target language other than by using the building blocks of the previously established L1 is argued to be the main reason why near but not totally native like language representations are formed and become established in adult L2 learners

The Second Time Around □ Minimalism and L2 Acquisition Julia Herschensohn, 2000-02-15 Linking recent advances in theoretical syntax and empirical research in language development the book claims that second language acquisition is not totally distinct from first language acquisition but rather is a replay a relearning of language It argues that Universal Grammar is a template guiding acquisition of L1 while constraining acquisition of L2 Assuming that a syntactic distinction crucial for language and its acquisition is the division between lexical and functional categories it argues that the key to L2 as well as L1 acquisition of syntax is the mastery of morphological features and their linking to functional categories It thus supports the availability of UG to the second language learner and the minimalist claim that cross linguistic variation is morpholexical Constructionism the hypothesis of L2A proposed in this account argues for a period of feature underspecification after loss of the L1 value followed by a progressive building of the L2 value through specific constructions

The Acquisition of Japanese as a Second Language Kazue Kanno, 1999-01-01 This text aims to broaden the field of second language acquisition focusing on Japanese rather than on more commonly studied European languages Chapters include studies on input and interaction research into the evaluation of proficiency and grammatical investigations *The Development of Prosodic Structure in Early Words* Mitsuhiro Ota, 2003-12-19 This monograph addresses three basic questions regarding the development of word internal prosodic structure How much of the phonological structure of early words is regulated by the same constituents and principles that govern the organization of prosodic structure of mature grammar Why do early words diverge from the adult targets in shape and size And what is the best way to model developmental changes that occur in prosodic structure Answers to these questions are explored through the longitudinal analysis of spontaneous production data from child Japanese The analysis provides new types of evidence and new arguments that the prosodic phonology of young children is largely continuous with that of adults and that the surface child adult divergence in word forms and the overall pattern of developmental changes are best explained in terms of ranked violable constraints on the representation of prosodic structure whose ordering is modified in the course of acquisition **The Acquisition of Swedish Grammar** Gunlög Josefsson, Christer Platzack, Gisela Håkansson, 2004-05-28 This book provides a number of studies of different aspects of Swedish child language Some of the thematic chapters present original unpublished data on the acquisition of tense on the range and frequency of different word order patterns in early child Swedish related to the input meaning the language of adults talking to the children or in the presence of the children The remaining chapters present overviews of previous research on the acquisition of word formation rules the noun phrase and wh questions The introduction to this volume contains a concise overview of the basic features of Swedish grammar and a comprehensive overview of different Swedish child language corpora The main body of research proceeds within a generative framework but

the text is designed to be accessible to researchers of different theoretical paradigms Aspects of Argument Structure Acquisition in Inuktitut Shanley Allen, 1996-01-01 This book discusses the first language acquisition of three morphosyntactic mechanisms of transitivity alternation in arctic Quebec Inuktitut Data derive from naturalistic longitudinal spontaneous speech samples collected over a nine month period from four Inuit children Both basic and advanced forms of passive structures are shown to be used productively by Inuktitut speaking children at an early age relative to English speaking children but consistent in age with speakers of non Indo European languages reported on in the literature potential explanations of this difference include frequency of caregiver input and details of language structure Morphological causatives appear slightly later in the acquisition sequence and their first instances reflect use of unanalyzed routines Lexical causatives are present from the earliest ages studied Evidence of a period of overgeneralization of lexical causatives in one subject at the same time as the morphological causative shows signs of being productively acquired suggests that the seeming overgeneralization may reflect nothing more than as yet unstable use of the morphological causative Noun incorporation structures are shown to be used productively by Inuktitut speaking children at an early age relative to Mohawk speaking children potential explanations of this difference include details of language structure and relative language use in the environments of the learners Findings are considered in light of current debates in the literature concerning continuity versus maturation of grammatical structure and concerning the functional categories available to the child at early stages of acquisition Data presented argue against late maturation and suggest that all functional categories may be accessed by the Inuktitut speaking child early in the acquisition process **Language Processing and Acquisition in Languages of Semitic, Root-Based, Morphology** Joseph Shimron, 2003-04-28 This book puts together contributions of linguists and psycholinguists whose main interest here is the representation of Semitic words in the mental lexicon of Semitic language speakers The central topic of the book confronts two views about the morphology of Semitic words The point of the argument is Should we see Semitic words morphology as root based or word based The proponents of the root based approach present empirical evidence demonstrating that Semitic language speakers are sensitive to the root and the template as the two basic elements bound morphemes of Semitic words Those supporting the word based approach present arguments to the effect that Semitic word formation is not based on the merging of roots and templates but that Semitic words are comprised of word stems and affixes like we find in Indo European languages The variety of evidence and arguments for each claim should force the interested readers to reconsider their views on Semitic morphology
