Thomas, Gregory Fulkerson, 2024-06-28 *Cities Change and Conflict* was one of the first texts to embrace the perspective of political economy as its main explanatory framework and then complement it with the rich contributions of human ecology as well as perspectives derived from critical approaches to social theory Although its primary focus is on North American cities the book contains several chapters on cities in other parts of the world including the Global North and Global South It provides both historical and contemporary accounts of the impact of globalization on urban development and urban institutions This sixth edition features a new groundbreaking chapter on the relationship between the physical environment and human settlements including the urban rural nexus This edition also expands and updates coverage of recent trends such as the establishment and evolution of gay neighborhoods the suburbanization of immigrant groups the situation of the immigrant youth known as Dreamers the reverse migration of Blacks from the North to the South and the proliferation of exurban communities Beyond examining the dynamics that shape the form and functionality of cities the text surveys the experience of urban life among different social groups including a new perspective on intersectionality as it affects people's experiences in cities It illuminates the workings of the urban economy local and federal governments and the criminal justice system while addressing policy debates and decisions that affect almost every aspect of urbanization and urban life **The Governance of Artificial Intelligence in the "Autonomous City"** Federico Cugurullo, Tan Yigitcanlar, Xiaoling Zhang, Vincent J. Del Casino Jr., Natalie Marie Gulsrud, Sarah Barns, 2023-10-18 Artificial intelligence AI is now mediating and in some cases seen to be controlling key urban services and infrastructures thus becoming a prominent feature of the contemporary city As portrayed in recent studies the autonomous city can be understood as a city where urban artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans At stake in these debates are questions related to the meaning and ongoing role of intelligence for both humans and machines While autonomous cars transport people service robots run shops drones deliver goods and city brains govern entire cities humans are redefining the meaning of what smart means in the city and what role the human being may play in future urban spaces With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore **Police in Urban America, 1860-1920** Eric H. Monkkenon, 2004-06-07 This book examines the rapid spread of uniformed police forces throughout late nineteenth century urban America It suggests that initially the new kind of police in industrial cities served primarily as agents of class control dispensing and administering welfare services as an unintentioned consequence of their uniformed presence on the streets *City Trenches* Ira Katznelson, 2013-10-02 The urban crisis of the 1960s revived a dormant social activism whose protagonists placed their

hoped for radical change and political effectiveness in community action. Ironically, the insurgents chose the local community as their terrain for a political battle that in reality involved a few strictly local issues. They failed to achieve their goals, Ira Katznelson argues, not so much because they had chosen their ground badly but because the deep split of the American political landscape into workplace politics and community politics defeats attempts to address grievances or raise demands that break the rules of bread and butter unionism on the one hand or of local politics on the other. A fascinating record of the encounter between today's reformers, the community activists, and the powers they challenge, *City Trenches* is also a probing analysis of the causes of urban instability. Katznelson anatomizes the unique workings of the American urban system which allow it to contain opposition through machine politics and as a last resort institutional innovation and co-optation. For example, the authorities' own version of decentralization used in the 1960s as a counter to a community control. Washington Heights Inwood, a multi-ethnic working class community in northern Manhattan, provides the setting for an absorbing close-up view of the historical evolution of local politics, the challenge to the system in the 1960s, and its reconstitution in the 1970s.
