Urinary Tract Infection G.R. Catto,2012-12-06 Urinary tract infection remains one of the most common reasons for an individual seeking medical advice Although the associated morbidity varies widely in adults such infections are less common but may constitute severe life threatening illness in children and in the elderly Diagnostic tests and treatment have been rationalized in recent years but many practising doctors still have difficulty in appreciating the patho physiological principles involved Particular difficulty is often experienced when treating patients with recurrent urinary tract infections covert bacteriuria vesico ureteric reflux elderly patients and those with indwelling catheters These topics are fully discussed in this volume Each chapter has been written by a recognized expert and practical aspects of patient management have been emphasized The information presented in this volume should prove of interest not only to nephrologists but to all practising clinicians

VII ABOUT THE EDITOR Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland the Renal Association and the Transplantation Society He has published widely on transplant and reproductive immunology calcium metabolism and general nephrology

Multisystem Diseases G.R. Catto,2012-12-06 During the last decade facilities for treating patients with end stage renal failure have expanded in all Westernized countries Partly as a consequence interest has been stimulated in many multisystem diseases which may progress to chronic renal failure Some of these diseases such as diabetes mellitus are common but still have controversial aspects to their investigation and management Others such as lupus nephritis are relatively rare but respond well to recent advances in therapy In addition to diabetes mellitus and lupus nephritis this volume has chapters on multiple myeloma and Henoch Schonlein purpura All the chapters have been written by acknowledged experts who have emphasized the practical aspects of patient management The information contained in this volume should thus prove of interest not only to nephrologists but to all practising clinicians

VII ABOUT THE EDITOR Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland the Renal Association and the Transplantation Society He has published widely on transplant and reproductive immunology calcium metabolism and general nephrology

Mycobacterial Skin Diseases Marwali Harahap,2012-12-06 We have endeavoured in this book to bring the reader up to date information which will contribute to an

enhanced ability to diagnose and treat mycobacterial skin diseases This volume is mainly concerned with conveying to dermatologists microbiologists immunologists dermatologists in training registrars in other specialties and interested family practitioners a concise appraisal of some recent developments in the various aspects of myco bacterial skin diseases The chapters dealing with bacteriology pathology and immunology have been planned to appear at the beginning of the book to provide the necessary conceptual framework for the section on clinical science which deals with the variety of clinical states The value of the clinical descriptions is vastly enhanced by a careful reading of the earlier chapters The contributing authors have been most cooperative in making this the tenth volume in the New Clinical Applications in Dermatology series an excellent treatise I thank each of them for their superb contributions If this book stimulates and encourages a greater interest in and a better understanding of mycobacterial skin diseases and enables physicians to serve more effectively those who suffer the time and effort spent to produce it will be amply rewarded PROFESSOR MARWALI HARAHAH IX SERIES

EDITOR S FOREWORD It was with great pleasure that I heard of Professor Harahap s wish to produce a volume on mycobacterial skin diseases *Haemodialysis* G.R. Catto,2012-12-06 For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure Initially developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology More recently as advances in therapy have dem onstrated the value of haemoperfusion for certain types of poisoning the basic principles ofhaemodialysis have been perceived as important in many areas of clinical practice In this volume the potential advantages of bicarbonate haemo dialysis are objectively assessed the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the con tinuing problems associated with such extracorporeal circuits analysed All the chapters have been written by recognized experts in their field The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians *Relationships in Dermatology* J. Verbov,2012-12-06 This is the eighth volume in the New Clinical Applications Dermatology Series Awareness of relationships is of prime importance in der matology Professor Scully and Dr Porter cover the skin and mouth in a comprehensive and informative manner Mr Peter Wright effortlessly and concisely brings the eye and the skin together Dr C Rowland Payne both relates and speculates on the enigma of sarcoidosis Pro fessor Elder concludes the book with a scholarly update on porphyria and the skin I thank all the above for their fine contributions This volume should have widespread appeal JULIAN VERBOV ABOUT THE EDITOR Dr Julian Verbov is Consultant Dermatologist to Liverpool Health Authority and Honorary Clinical Lecturer in Dermatology at the University of Liverpool He is a member of the British Association of Dermatologists repre senting the British Society for Paediatric Dermatology on its Executive Committee He is Editor of the Proceedings of the North of England Dermatological Society He is a Fellow of the Zoological Society of London and a Member of the Society of Authors He is a popular national and

international speaker and author of more than 200 publications

Management of Renal Hypertension G.R.

Catto, 2013-04-17 During the last few years renal hypertension has become a subject of increasing importance. The development of improved radiological techniques notably intravenous and intra arterial digital subtraction angiography has made the diagnosis of renal artery stenosis more reliable while advances in vascular surgery and the introduction of percutaneous trans luminal angioplasty have caused major changes in clinical practice. The increasing use of such potent antihypertensive agents as the angiotensin I converting enzyme inhibitors has emphasized the problem of renal artery stenosis in older patients with wide spread vascular disease as well as improving the prognosis of patients with accelerated hypertension. This book examines the surgical and medical aspects of renal hypertension in the light of these recent advances. Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician. The developments of the last decade have emphasized that renal hypertension is no longer a matter only for the nephrologist but a subject on which all clinicians should be well informed.

Drugs and the Kidney G.R. Catto, 2012-12-06 In recent years both doctors and patients have become increasingly aware that many essential drugs may induce unfortunate side effects in susceptible individuals. The kidney is the principal route of excretion for many of these substances and may as a result become involved in pathological processes. Developments in haemodialysis and haemo perfusion may be of value in increasing the rate of excretion of potentially toxic substances but it is essential that the advantages and disadvantages of these techniques are fully appreciated by all with an interest in clinical practice. This book details the recent advances in understanding of analgesic nephropathy, interstitial nephritis, elimination of poisons and drug monitoring. Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician. The developments of the last decade have emphasized that drug toxicity is a subject on which all clinicians but perhaps especially nephrologists should be fully informed.

ABOUT THE EDITOR Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board. His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society.

Calculus Disease G.R. Catto, 2012-12-06 Renal stone disease remains a common clinical problem. Patients may attend either medical or surgical clinics and do not infrequently present as acute abdominal emergencies to general practitioners, physicians, surgeons and even gynaecologists. Recent urinary calculi continue to cause considerable morbidity despite the recent advances in our understanding of the pathogenesis of the different types of stones involved and despite improvements in treatment by appropriate drug therapy, by ultrasound techniques and by lithotripsy. This volume discusses the investigation and management of patients with calculus disease. Each chapter has been written by

a n experienced clinician and provides information of considerable relevance and importance for all doctors engaged in clinical practice The technical developments o f the last few years have clearly demonstrated that renal stone disease even when recurrent should be an uncommon cause of chronic renal failure Knowledge o f the recent developments in this field is important for all practising doctors and even more important for their patients *Chronic Renal Failure* G.R.

Catto,2012-12-06 For the last two decades the topic of chronic renal failure has been dominated by discussions on dialysis and transplantation As facilities for treating patients with end stage renal failure have become more readily available at least in Europe and North America attention has once again been drawn to conservative measures which may improve both the overall prognosis and the quality of life of patients with renal impairment Although severe renal failure may be progressive and many patients will ultimately require some form of renal replacement therapy it is now widely appreciated that distressing symptoms can often be ameliorated by judicious medical treatment Children as well as and perhaps to a greater extent than adults may benefit from such therapy This volume examines relevant trends in the conservative management of both adults and children with chronic renal failure Each chapter has been written by recognized experts and provides information of clinical relevance for the average clinician As the overall prognosis for patients with end stage renal failure improves it is clear the management of patients with relatively stable chronic renal failure is an important topic not only for nephrologists but for all practising clinicians **Continuous Ambulatory Peritoneal Dialysis** G.R. Catto,2012-12-06

For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure Initially developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology More recently as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning the basic principles of haemodialysis have been perceived as important in many areas of clinical practice In this volume the potential advantages of bicarbonate haemodialysis are objectively assessed the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extra corporeal circuits analysed All the chapters have been written by recognized experts in their field The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians ABOUT THE EDITOR Dr Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital Boston USA He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland the Renal Association and the Transplantation Society **Transplantation** G.R. Catto,2012-12-06 Renal transplantation is now accepted as the treatment of choice for patients with end stage renal failure During the last decade both patients and graft survival rates

have increased significantly and when assessed at one year are now greater than 90% and 80% respectively These marked improvements have occurred at a time when increasing numbers of patients in the older age groups and with more complex forms of renal disease are being accepted for transplantation The reasons for the improved clinical results are not fully understood but are probably linked with changes in blood transfusion policy tissue typing policy and drug therapy These topics together with immunological monitoring and details of how to treat the highly sensitized patient are fully covered in this volume All the chapters have been written by recognized experts in their field Not only are the recent advances well documented but the likely future developments in management are identified and discussed As renal transplantation is now the single most common of treatment for renal failure the information presented in this form volume should prove of value to all with an interest in current clinical practice **Talking Points in Dermatology - II** Julian Verbov,1987-11-30

Ankylosing Spondylitis J. Calabro,G. Dick,2012-12-06 Ankylosing spondylitis the third most common form of chronic arthritis is a systemic rheumatic disorder characterized by inflammation of the axial skeleton spine and sacroiliac joints and a host of systemic manifestations With comprehensive care the vast majority of patients can lead full productive lives However management can succeed only with patient education and exercise Recent communication from my co editor Carson Dick serves to remind me that there are several unresolved issues concerning drug therapy in ankylosing spondylitis Clearly in spite of my views there are others who do not believe that the non steroidal anti inflammatory drugs NSAIDs alter favorably the course of disease and they must be administered for prolonged periods and in anti inflammatory quantities to be effective I would agree with Carson Dick that aspirin and phenylbutazone are way down the list of drug priorities following the marketing of other NSAIDs that are effective and safer I am grateful to my contributors to this volume all recognized authorities on their particular topic It has been a privilege collaborating with them on this particular volume ABOUT THE EDITOR John J Calabro MD is Professor of Medicine and Pediatrics at the University of Massachusetts Medical School and Director of Rheumatology at Saint Vincent Hospital both in Worcester Massachusetts USA He is the author of over 260 scientific articles including several monographs and a book on arthritis for patients **Current Concepts in Contact**

Glomerulonephritis G.R. Catto,2012-12-06 Glomerulonephritis has always been

regarded as a complex subject Different forms of the disease can cause death in a matter of weeks nephrotic syndrome which might or might not prove responsive to steroid therapy or no symptoms at all Improved pathological techniques and criteria have permitted a more accurate diagnosis and prognosis to be established for many patients With increased understanding of the immunological mechanisms involved it has become apparent that many patients presenting with a variety of symptoms and signs may have glomerulonephritis as their primary pathological process This book examines the clinical

pathological and aetiological factors involved in the common forms of glomerulonephritis Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician The developments of the last decade have emphasized that glomerulonephritis is no longer a matter only for the nephrologist but a subject on which all clinicians should be well informed Cosmetic Medicine and Surgery Pierre Andre,Eckart
