*The Tancheng-Lujiang Wrench Fault System*, by Xu Jiawei. John Wiley & Sons, Chichester, U.K., 1993. Hardcover, XV + 279 pp. (ISBN 0-471-93332-5).

*The Tancheng-Lujiang Wrench Fault System* edited by Xu Jiawei characterizes the fault system as a tectonic feature of global significance. The book's conception began in the early 1960's after Professor Xu proposed that hundreds of kilometers of left-lateral displacement occurred along the Tancheng-Lujiang (Tan-Lu) fault system in northeastern China. While heretical at that time, the Chinese geologic community awoke from the Cultural Revolution a decade later to discover that the rest of the world had experienced the plate tectonic revolution and large-scale horizontal motions such as Xu had proposed were widely accepted. In light of the new theories, Professor Xu's original hypothesis remained valid. After thirty years of persistent research, his work is considered fundamental to the understanding of the tectonic development of the area and has affectionately earned him the nick-name, "da pingyi" or "big displacement". His ideas are now commonplace in any geologic text covering eastern Asia.

The book is a modern compilation of research performed mostly by Professor Xu and his research group at the Hefei University of Technology. Although many of the articles are published elsewhere in Chinese and English, this text is the most complete English work on the tectonic feature, which is one of the largest continental shear zones in the world. The anthology is thus a logical starting point for anyone interested in the geology of eastern Asia and appropriate for all students of continental shear systems.

The multidisciplinary approach used to document the fault system that spans 5,000 km from southern China to the northern reaches of eastern Siberia incorporates a wide variety of field measurements and observations. A geophysical description of the shear zone using geomagnetic and gravity methods is also presented (Chapter 12). Both the offset of distinctive fossils and marker beds (Chapter 7) and relative displacement based on differences in paleomagnetic inclination (Chapter 11) provide welcomed evidence for the amount (500 to 800 km) and timing (Late Jurassic to Early Cretaceous) of sinistral motion along the faults.

Discrepancies in the book highlight the controversies currently debated in the geologic community and emphasize the complexities in interpreting geologic data. For example, Precambrian stratigraphic sections from the east side of the fault in Shandong Province and Korea are argued to have affinities with similar sections in both south China (Chapter 5) and north China (Chapter 18). In Chapter 2, left-lateral faults in south China (e.g., the Changle-Nan'ao fault) are connected to the Honam fault in southern Korea indicating that the latter is also left-lateral. In contrast, evidence presented in Chapter 18 suggests the Honam fault is right-lateral. Some lack of detail or occasional ambiguities in location maps may confuse a reader unfamiliar with local names.

The kinematic sense and timing of motion along the faults described in the text are critical
