Target-size Analysis of Membrane Proteins J. Craig Venter, Chan Y. Jung, 1987 **Target-Size Analysis of Membrane Proteins (Volume 10).** JC Venter (Ed), 1987 *Biophysical Analysis of Membrane Proteins* Eva Pebay-Peyroula, 2008-06-25

Meeting the need for a book on developing and using new methods to investigate membrane proteins this is the first of its kind to present the full range of novel techniques in one resource Top researchers from around the world focus on the physical principles exploited in the different techniques and provide examples of how these can bring about important new insights Following an introduction further sections discuss structural approaches molecular interaction and large assemblies dynamics and spectroscopies finishing off with an exploration of structure function relationships in whole cells **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1988 **Membrane Proteins Production for Structural Analysis** Isabelle Mus-Veteau, 2014-06-20 This book updates the latest development in production stabilization and structural analysis techniques of membrane proteins This field has made significant advances since the elucidation of the first 3 D structure of a recombinant G Protein Coupled Receptor GPCR rhodopsin with the structure of several more GPCRs having been solved in the past five years In fact the 2012 Nobel Prize in Chemistry was awarded for groundbreaking discoveries on the inner workings of GPCRs This book is essential reading for all researchers biochemists and crystallographers working with membrane proteins who are interested by the structural characterization of their favorite protein and who wish to follow the expression migration modifications and recycling of a membrane protein **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 Methods of Biochemical Analysis David Glick, 2009-09-25 Biochemical analysis is a rapidly expanding field and is a key component of modern drug discovery and research Methods of Biochemical Analysis provides a periodic and authoritative review of the latest achievements in biochemical analysis Founded in 1954 by Professor David Glick Methods of Biochemical Analysis provides a timely review of the latest developments in the field **The Receptors** P. Michael Conn, 2014-05-10 The Receptors Volume II deals with receptors for somatostatin vitamin D insulin and animal viruses as well as for the 2 adrenergic and Ah systems The significance of translational modifications of receptor ligands is discussed along with the mechanisms of receptor ligand interactions The role of receptors in development and their regulation by tumors are also considered Comprised of 12 chapters this volume begins with a detailed account of the vitamin D receptor paying particular attention to its biochemical and physical properties as well as its mechanism of action The discussion then turns to experimental discrimination between alternative mechanistic models for the receptor mediated stimulation of adenylate cyclase the role of microaggregation in hormone receptor effector interactions and the biology and biochemistry of the Ah receptor Subsequent chapters explore the interactions of animal viruses with cell surface receptors insulin receptors determination of the size of neurotransmitter receptors by radiation inactivation target size analysis and protein

glycosylation and receptor ligand interactions This book will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology **Journal of Electron Microscopy Technique** ,1988 **International Tables for Crystallography, Volume F** Eddy Arnold,Daniel M. Himmel,Michael G. Rossmann,2012-03-05 International Tables for Crystallography Volume F is an expert guide to macromolecular crystallography for the structural biologist It was commissioned by the International Union of Crystallography in recognition of the extraordinary contributions that knowledge of macromolecular structure has made and will make to the analysis of biological systems from enzyme catalysis to the workings of a whole cell The volume covers all stages of a crystallographic analysis from the preparation of recombinant proteins through crystallization diffraction data collection phase determination structure validation and structure analysis Although the volume is written for experienced scientists it is recognized that the reader is more likely to be a biologist interested in structure than a classical crystallographer interested in biology Thus there are chapters on the fundamentals history and current perspectives of macromolecular crystallography as well as on useful programs and databases such as the Protein Data Bank Each chapter is written by one or more internationally recognized experts This second edition features 19 new articles and many articles from the first edition have been revised The new articles cover topics such as standard definitions for quality indicators expression of membrane proteins protein engineering high throughput crystallography radiation damage merohedral twinning low resolution ab initio phasing robotic crystal loading whole cell X ray diffraction imaging and halogen interactions in biological crystal structures There are also new articles on relevant software including software for electron microscopy These enhancements will ensure that Volume F continues to be a key reference for macromolecular crystallographers and structural biologists More information on the series can be found at <http://it.iucr.org> **Ion Transport** David Keeling,Chris Benham,2013-10-22 Ion Transport is a collection of papers from the Smith Kline French Research Symposium on Ion Transport held in Cambridge on April 12-14 1989 These papers focus on the plasma membrane particularly on the three main classes of transporters namely pumps exchangers and channels Some papers discuss the different experimental approaches from electrophysiological and ion flux measurements through pharmacology molecular biology electrostatics and computer modeling Other papers discuss the P type cation pump a class of ATP driven ion pumps which is determined from its subunit composition and from the results of the hydrolysis of ATP Several papers explain the techniques used in ion channels and their modulation These techniques can be used in the voltage gated Na channel or in permeation mechanisms Other papers examine the transport proteins involved in the physiology of ion transport Ions and fluid transport relate to at the molecular level how ions cross membranes A minimum model in conjunction with theoretical perspective can describe the mechanism by which ions move through channels This collection can prove beneficial for biochemists micro biologists cellular researchers and academicians involved in the study of cellular biology or biophysics **Nephrology** Michinobu

Membrane Proteins E. Quagliariello, F. Palmieri, 2014-05-21 Structure and Function of Membrane Proteins documents the proceedings of the International Symposium on Structure and Function of Membrane Proteins held in Selva di Fasano on May 23-26, 1983. This compilation makes it possible to obtain more information on the structure of membrane proteins, determining the structure in order to understand the function and mechanism of action that is only understood by knowledge of the atomic structure. The gathering of data on the function of membrane proteins prior to knowledge of their structure is valuable for characterizing and defining the proteins. Once the structure is known, another stage of research will penetrate to the functional assignments of the structure. Other topics covered include the physical methods for the structure-function relationship, identification and mapping of sites in membrane proteins, and primary structure of transport proteins. Tertiary structure and molecular shape of membrane proteins and structure-function relationship in membrane proteins are also examined. This book is a good source of information for students and individuals conducting research on biochemistry, specifically on membrane proteins.

Study of Bacteriorhodopsin in a Controlled Lipid Environment Vivien Yeh, 2018-10-26 This book focuses on the study of how the properties of nanodiscs such as lipid composition and size influence the function of the embedded integral membrane protein bacteriorhodopsin. The author performed systematic studies to show that the lipid composition and the charge of the hydrophobic head and the structure of hydrophilic tails affect the photocycle pathway of bacteriorhodopsin, which is closely associated with its proton pumping activity. Furthermore, the author demonstrated a highly efficient method for extracting membrane proteins directly from the biological membrane, preserving protein conformation, function, and essential native lipids. This book demonstrates optimization and sample preparation and presents practical methods of preparing membrane protein embedded nanodisc samples for biophysical studies, which benefit structural and functional studies in the field of membrane protein characterization both
