Targeted Drugs:

Targeted Therapies in Cancer: Francesco Colotta, Alberto Mantovani, 2007-12-05 In September 2005 an International Meeting on Targeted Therapies in Cancer Myth or Reality was held in Milan This successful Meeting was intended to represent a forum for scientists and clinicians working in cancer drug discovery and therapy to share their reflections and experiences on how the paradigm shift from empiricism to molecular targeted therapies is contributing to the translation of basic knowledge into new therapies for cancer patients This book collects the contributions given by scientists and clinicians from Academia and Industry who participated to this Meeting We hope that this book contributes to improve our approach to cancer drug discovery and ultimately to find new more efficacious and better tolerated drugs for cancer patients It provides an overview of diverse approaches ranging from drug discovery to cellular therapy Although this change in paradigm has been useful its entry into the clinical arena was associates with unforeseen problems including the emergence of resistance unexpected side effects and failures Time is therefore ripe for a critical cultural reflection on the state of the art prospects and limitations Ultimately is targeted therapy in cancer a myth or a reality Targeted Therapies for Solid Tumors Antonio Russo, Rafael Rosell, Christian Rolfo, 2015-03-11 This volume provides readers a comprehensive and state of the art overview about the range of applications of targeted therapies for solid tumors. The sections of the book have been structured to review the oncogene addicted tumors the pharmacology and clinical development of new molecularly targeted agents the use of biomarkers as prognostic predictive and surrogate endpoints and the evaluation of tumor response and specific malignancies treated with targeted agents The book also covers some of the newest developments in cancer therapy that are not adequately covered by any current available literature Written by recognized experts in the field Targeted Therapies for Solid Tumors A Handbook for Moving Toward New Frontiers in Cancer Treatment provides a unique and valuable resource in the field of molecular oncology both for those currently in training and for those already in clinical or research practice

Designing Multi-Target Drugs J. Richard Morphy, C John Harris, 2012-03-28 Multi target drug discovery MTDD is an emerging area of increasing interest to the drug discovery community Drugs that modulate several targets have the potential for an improved balance of efficacy and safety compared to single targets agents Although there are a number of marketed drugs that are thought to derive their therapeutic benefit by virtue of interacting with multiple targets the majority of these were discovered accidentally Written by world renowned experts this is the first book to gather together knowledge and experiences of the rational discovery of multi target drugs It describes the current state of the art the achievements and the challenges of the field and importantly the lessons learned by researchers to date and their application to future MTDD
