Collected Papers Robert J. Aumann, 2000 Robert Aumann's career in game theory has spanned over research from his doctoral dissertation in 1956 to papers as recent as January 1995 Threaded through all of Aumann's work symbolized in his thesis on knots is the study of relationships between different ideas between different phenomena and between ideas and phenomena When you look closely at one scientific idea writes Aumann you find it hitched to all others It is these hitches that I have tried to study

Nonmonotonic Logic V. Wiktor Marek, Mirosław Truszczyński, 2013-03-14 When I first participated in exploring theories of nonmonotonic reasoning in the late 1970s I had no idea of the wealth of conceptual and mathematical results that would emerge from those halting first steps This book by Wiktor Marek and Mirosław Truszczyński is an elegant treatment of a large body of these results It provides the first comprehensive treatment of two influential nonmonotonic logics autoepistemic and default logic and describes a number of surprising and deep unifying relationships between them It also relates them to various modal logics studied in the philosophical logic literature and provides a thorough treatment of their applications as foundations for logic programming semantics and for truth maintenance systems It is particularly appropriate that Marek and Truszczyński should have authored this book since so much of the research that went into these results is due to them Both authors were trained in the Polish school of logic and they bring to their research and writing the logical insights and sophisticated mathematics that one would expect from such a background I believe that this book is a splendid example of the intellectual maturity of the field of artificial intelligence and that it will provide a model of scholarship for us all for many years to come Ray Reiter Department of Computer Science University of Toronto Toronto Canada M5S 1A4 and The Canadian Institute for Advanced Research Table of Contents 1 1 Introduction

Probabilistic Reasoning in Intelligent Systems Judea Pearl, 2014-06-28 Probabilistic Reasoning in Intelligent Systems is a complete and accessible account of the theoretical foundations and computational methods that underlie plausible reasoning under uncertainty The author provides a coherent explication of probability as a language for reasoning with partial belief and offers a unifying perspective on other AI approaches to uncertainty such as the Dempster Shafer formalism truth maintenance systems and nonmonotonic logic The author distinguishes syntactic and semantic approaches to uncertainty and offers techniques based on belief networks that provide a mechanism for making semantics based systems operational Specifically network propagation techniques serve as a mechanism for combining the theoretical coherence of probability theory with modern demands of reasoning systems technology modular declarative inputs conceptually meaningful inferences and parallel distributed computation Application areas include diagnosis forecasting image interpretation multi sensor fusion decision support systems plan recognition planning speech recognition in short almost every task requiring that conclusions be drawn from uncertain clues and incomplete information Probabilistic Reasoning in Intelligent Systems will be of special interest to scholars and researchers in AI decision theory statistics logic philosophy cognitive psychology and the management sciences Professionals in the areas of knowledge based systems operations research engineering and statistics will find theoretical and computational tools of immediate practical use The book can also be used as an excellent text for graduate level courses in AI operations research or applied probability

Reasoning About Plans James Allen, Henry Kautz, Richard Pelavin, Josh Tenenber, 2014-06-28 This book presents four contributions to planning research within an integrated framework James Allen offers a survey of his research in the field of temporal reasoning and then describes a planning system formalized and implemented directly as an inference process in the temporal logic Starting from the same logic Henry Kautz develops the first formal specification of the plan recognition process and develops a powerful family of algorithms for plan recognition in complex situations Richard Pelavin then extends the temporal logic with model operators that allow the representation to support reasoning about complex planning situations involving simultaneous interacting actions and interaction with external events Finally Josh Tenenber introduces two different formalisms of abstraction in planning systems and explores the properties of these abstraction techniques in depth

Principles of Semantic Networks John F. Sowa, 2014-07-10 Principles of Semantic Networks Explorations in the Representation of Knowledge provides information pertinent to the theory and applications of semantic networks This book deals with issues in knowledge representation which discusses theoretical topics independent of particular implementations Organized into three parts encompassing 19 chapters this book begins with an overview of semantic network structure for representing knowledge as a pattern of interconnected nodes and arcs This text then analyzes the concepts of subsumption and taxonomy and synthesizes a framework that integrates many previous approaches and goes beyond them to provide an account of

abstract and partially defines concepts Other chapters consider formal analyses which treat the methods of reasoning with semantic networks and their computational complexity This book discusses as well encoding linguistic knowledge The final chapter deals with a formal approach to knowledge representation that builds on ideas originating outside the artificial intelligence literature in research on foundations for programming languages This book is a valuable resource for mathematicians

Representations of Commonsense Knowledge Ernest Davis, 2014-07-10 *Representations of Commonsense Knowledge* provides a rich language for expressing commonsense knowledge and inference techniques for carrying out commonsense knowledge This book provides a survey of the research on commonsense knowledge Organized into 10 chapters this book begins with an overview of the basic ideas on artificial intelligence commonsense reasoning This text then examines the structure of logic which is roughly analogous to that of a programming language Other chapters describe how rules of universal validity can be applied to facts known with absolute certainty to deduce other facts known with absolute certainty This book discusses as well some prominent issues in plausible inference The final chapter deals with commonsense knowledge about the interrelations and interactions among agents and discusses some issues in human and social interactions that have been studied in the artificial intelligence literature This book is a valuable resource for students on a graduate course on knowledge representation

Logic-Based Artificial Intelligence Jack Minker, 2000-12-31 The use of mathematical logic as a formalism for artificial intelligence was recognized by John McCarthy in 1959 in his paper on Programs with Common Sense In a series of papers in the 1960 s he expanded upon these ideas and continues to do so to this date It is now 41 years since the idea of using a formal mechanism for AI arose It is therefore appropriate to consider some of the research applications and implementations that have resulted from this idea In early 1995 John McCarthy suggested to me that we have a workshop on Logic Based Artificial Intelligence LBAI In June 1999 the Workshop on Logic Based Artificial Intelligence was held as a consequence of McCarthy s suggestion The workshop came about with the support of Ephraim Glinert of the National Science Foundation IIS 9S2013S the American Association for Artificial Intelligence who provided support for graduate students to attend and Joseph JaJa Director of the University of Maryland Institute for Advanced Computer Studies who provided both manpower and financial support and the Department of Computer Science We are grateful for their support This book consists of refereed papers based on presentations made at the Workshop Not all of the Workshop participants were able to contribute papers for the book The common theme of papers at the workshop and in this book is the use of logic as a formalism to solve problems in AI

Levine, Manuel Aparicio IV, 2013-04-15 The second published collection based on a conference sponsored by the Metroplex Institute for Neural Dynamics the first is Motivation Emotion and Goal Direction in Neural Networks LEA 1992 this book

addresses the controversy between symbolicist artificial intelligence and neural network theory A particular issue is how well neural networks well established for statistical pattern matching can perform the higher cognitive functions that are more often associated with symbolic approaches This controversy has a long history but recently erupted with arguments against the abilities of renewed neural network developments More broadly than other attempts the diverse contributions presented here not only address the theory and implementation of artificial neural networks for higher cognitive functions but also critique the history of assumed epistemologies both neural networks and AI and include several neurobiological studies of human cognition as a real system to guide the further development of artificial ones Organized into four major sections this volume outlines the history of the AI neural network controversy the strengths and weaknesses of both approaches and shows the various capabilities such as generalization and discreteness as being along a broad but common continuum introduces several explicit theoretical structures demonstrating the functional equivalences of neurocomputing with the staple objects of computer science and AI such as sets and graphs shows variants on these types of networks that are applied in a variety of spheres including reasoning from a geographic database legal decision making story comprehension and performing arithmetic operations discusses knowledge representation process in living organisms including evidence from experimental psychology behavioral neurobiology and electroencephalographic responses to sensory stimuli
