Snow Avalanche Hazards And Mitigation In The United States:

Snow Avalanche Hazards and Mitigation in the United States National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Ground Failure Hazards Mitigation Research, 1990-02-01 The present mortality as a result of snow avalanches exceeds the average mortality caused by earthquakes as well as all other forms of slope failure combined Snow avalanches can range from small amounts of loose snow moving rapidly down a slope to slab avalanches in which large chunks of snow break off and destroy everything in their path Although considered a hazard in the United States since the westward expansion in the nineteenth century in modern times snow avalanches are an increasing concern in recreational mountainous areas However programs for snow avalanche hazard mitigation in other countries are far ahead of those in the United States The book identifies several steps that should be taken by the United States in order to establish guidelines for research technology transfer and avalanche legislation and zoning **Multi Hazard Identification and Risk Assessment** ,1997 **The Global Cryosphere** Roger G. provides a comprehensive overview of the physical technological and social components of natural disaster. The main disaster producing agents are reviewed systematically in terms of geophysical processes and effects, monitoring, mitigation, and warning. The relationship between disasters and society is examined with respect to a wide variety of themes including damage assessment and prevention, hazard mapping, emergency preparedness, the provision of shelter, and the nature of reconstruction. Medical emergencies and the epidemiology of disasters are described, and refugee management and aid to the Third World are discussed. A chapter is devoted to the sociology, psychology, economics, and history of disasters. In many parts of the world, the toll of death, injury, damage, and deprivation caused by natural disasters is becoming increasingly serious. Major earthquakes, volcanic eruptions, droughts, floods, and other similar catastrophes are often followed by large relief operations characterized by substantial involvement of the international community. The years 1990-2000 have therefore been designated by the United Nations as the International Decade for Natural Disaster Reduction. The book goes beyond mere description and elevates the field of natural catastrophes to a serious academic level. The author's insights and perspectives are also informed by his practical experience of being a disaster victim and survivor, and hence the unique perspective of a participant observer. Only by surmounting the boundaries between disciplines can natural catastrophe be understood, and mitigation efforts made effective. Thus, this book is perhaps the first completely interdisciplinary, fully comprehensive survey of natural hazards and disasters. It has a clear theoretical basis, and it recognizes the importance of six fundamental approaches to the field, which it blends carefully in the text in order to avoid the partiality of previous works. It covers the earth and social sciences as well as engineering, architecture, and development studies. This breadth is made possible by virtue of a strong emphasis on simple principles of the interaction of geophysical agents with human vulnerability and response. All students of environmental sciences, studies, and geography should find this book useful. It is an introductory text which treats this dramatic subject area as something demanding serious academic treatment, and not just as an assemblage of horror stories. This book is intended for undergraduate students in geography and environmental studies, sciences. The book should also appeal to any professional or researcher concerned with man-environment relations, whether in social science or natural science or engineering.

Natural Hazards Edward A. Keller, Duane E. DeVecchio, 2016-07-07 Natural Hazards Earth Processes as Hazards, Disasters and Catastrophes Fourth Edition is an introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The book is designed for a course in natural hazards for non-science majors and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society. Natural Hazards uses historical to recent examples of hazards and disasters to explore how and why they happen and what we can do to limit their effects. The text's up-to-date coverage of recent disasters brings a fresh perspective to the material. The Fourth Edition continues our new active learning approach that includes reinforcement of learning objectives with a fully updated visual program and pedagogical tools that highlight fundamental concepts of the text. This program will provide an interactive and engaging learning experience for your students. Here's how: Provide a balanced approach to the study of natural hazards. Focus on the basic earth science of hazards as well as roles of human processes and effects on our planet in a broader, more balanced approach to the study of natural hazards. Enhance understanding and comprehension of natural hazards. Newly revised stories and case studies give students a behind-the-scenes glimpse into how hazards are evaluated from a scientific and human perspective, the stories of real people who survive natural hazards and the lives and research of professionals who have contributed significantly to the research of hazardous events. Strong pedagogical tools reinforce the text's core features. Chapter structure and design organizes the material into three major sections to help students learn, digest, and review learning objectives.
