Melack,2020-12-01 The Sierra Nevada California s iconic mountain range harbors thousands of remote high elevations lakes from which water flows to sustain agriculture and cities As climate and air quality in the region change so do the watershed processes upon which these lakes depend In order to understand the future of California s ecology and natural resources we need an integrated account of the environmental processes that underlie these aquatic systems Synthesizing over three decades of research on the lakes and watersheds of the Sierra Nevada this book develops an integrated account of the hydrological and biogeochemical systems that sustain them With a focus on Emerald Lake in Sequoia National Park the book marshals long term limnological and ecological data to provide a detailed and synthetic account while also highlighting the vulnerability of Sierra lakes to changes in climate and atmospheric deposition In so doing it lays the scientific foundations for predicting and understanding how the lakes and watersheds will respond The United States Detailed National Report on Systematic Observations for Climate ,2001 Idaho Basin Outlook Report ,2006

changes in Earth's interior, land, surface, biosphere, atmosphere, and oceans affect all aspects of life. Understanding these changes requires a range of observations acquired from land, sea, air, and space-based platforms. To assist NASA, NOAA, and USGS in developing these tools, the NRC was asked to carry out a decadal strategy survey of Earth science and applications from space that would develop the key scientific questions on which to focus Earth and environmental observations in the period 2005-2015 and beyond and present a prioritized list of space programs, missions, and supporting activities to address these questions. This report presents a vision for the Earth science program, an analysis of the existing Earth Observing System, and recommendations to help restore its capabilities, an assessment of and recommendations for new observations and missions for the next decade, an examination of and recommendations for effective application of those observations, and an analysis of how best to sustain that observation and applications system.

Numerical Analysis for Engineers Bilal Ayyub, Richard H. McCuen, 2015-09-18. Numerical Analysis for Engineers: Methods and Applications demonstrates the power of numerical methods in the context of solving complex engineering and scientific problems. Passive Microwave Remote Sensing of Land-Atmosphere Interactions Bhaskar J. Choudhury, Yann H. Kerr, Eni G. Njoku, Paolo Pampaloni, 2023-05-31. Recent advances in theory and observations using passive microwave remote sensing have highlighted the potential of spaceborne sensors for contributing to the required land surface measurements of soils, vegetation, snow cover, and precipitation. Furthermore, the spatial resolution of passive microwave observations matches the spatial scales of large-scale models of land-atmosphere interactions, both for data assimilation and validation. In order to stimulate and focus this research, a workshop sponsored by ESA and NASA was organized to review the state of the art in microwave radiometry related to land applications and to exchange ideas leading into new directions for future research. This volume contains the refereed papers from the aforementioned ESA-NASA workshop, which are arranged by topic as well as the edited working group reports.
