Accounting for Economic Development and Social Change S. J. Keuning, 1996 The relevance of applied economic and social analysis stands or falls with the strength of the analytical tools on the one hand and the appropriateness

of the underlying data framework on the other hand Whereas virtually all economic and sociological research focuses on the analytical tools this book deals with the design of an appropriate data framework In many countries it is not so much a lack of data per se that is the problem Official statistics often comprise a wealth of information laid down in many different publications The main difficulty then relates to the lack of integration of these statistics so that all kinds of events that are interrelated in reality can only be studied in isolation Of course the lack of integration of statistics applies less to economic data as the national accounts function as a coordinating information system for these data In fact an important aim of this book is to demonstrate that the basic principles of national accounts can and should be extended to a wider range of statistics notably social and environmental statistics For this purpose a so called System of Economic and Social Accounting Matrices and Extensions SESAME is designed and applied in this book following its announcement in the 1993 System of National Accounts the guidelines of the United Nations and other international organizations

Mathematical Economics and the Dynamics of Capitalism Peter Flaschel, Michael Landesmann, 2016-04-01 Richard Goodwin was a pioneer in the use of mathematical tools to understand the dynamics of capitalist economies This book contains contributions which focus on the rigorous extension of Goodwin's modelling of macro dynamics and the micro structures underlying them and also research with a wider perspective related to Goodwin's vision of an integrated Marx Keynes Schumpeter M K S system of the dynamics of capitalist economies The variety of approaches in this book range from detailed business cycle analyses to Schumpeterian processes of creative destruction They include thorough theoretical analysis of delayed dynamical systems empirical studies of Goodwin's classical growth cycle model and the integration of Keynesian aspects of effective demand and of financial mechanisms that impact the real macro economy micro economic structural analysis expectations driven aspects of micro founded business cycle modelling

The Balance Between Industry and Agriculture in Economic Development Sukhamoy Chakravarty, 1989-08-14

Beyond Experiments in Development Economics J. Edward Taylor, Mateusz J. Filipiński, 2014-07-10 This book provides researchers students and practitioners with a methodology to evaluate the impacts of a wide diversity of development projects and policies on local economies Projects and policies often create spillovers within

project areas LEWIE uses simulation methods to quantify these spillovers It has become a complement to randomized control trials RCTs as governments and donors become interested in documenting impacts beyond the treated comparing the likely impacts of alternative interventions and designing complementary interventions to influence program and policy impacts It is also a tool for impact evaluation where RCTs are not feasible Chapters 1-4 motivate and present the basics of impact simulation including how to design a LEWIE model how to estimate the model and how to obtain the necessary data The remaining chapters provide a diversity of interesting real world applications and extensions of the basic models The applications include evaluations of the impacts of cash transfers for the poor ecotourism global food price shocks irrigation projects migration and corruption Each chapter provide readers with the tools they need to conduct their own local economy wide impact evaluations All models and data used in this book are available on line

Compilation of Input-Output

Tables J. V. Skolka, 2013-03-08 Those familiar with input output analysis know well that compilation of input output tables is a difficult statistical work The very first input output tables e.g. such as those for the United States economy in 1919 and 1929 or for the Federal Republic of Germany in the fifties were the results of applied economic research But soon after official statistical bodies who understood that input output tables consistent with national accounts can very much improve the quality of economic statistics started systematic work in this field It was also obvious that international exchange of experience can be useful The two main international fora in which discussion of input output compilation took place were the international input output conferences and United Nations bodies Already at the First International Conference on Input Output Techniques Driebergen 1950 several authors analysed the relations between input output tables and national accounts The topic was also on the programme of the Second Conference Varenna 1954 At the Third Conference Geneva 1961 standardization of input output statistics was a topic of a panel discussion of eight experts The relevant papers which are still of interest can be found in published conference proceedings

Trade Policy and Industrialization in Turbulent Times Gerry Helleiner, 2002-09-11 The relationship between trade policy and industrialization has provoked much controversy Can trade policy promote economic growth in developing countries Those actively working in the area are becoming increasingly sceptical about the conventional advice given by international policy advisors and organizations This volume builds upon earlier theoretical and empirical research on trade policy and industrialization but is
