Ideology, Social Theory, and the Environment William D. Sunderlin, 2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity

Social Theory and the Global Environment Ted Benton, Michael Redclift, 2013-01-11 This book marks a watershed in the social sciences The qualitative critical perspective of sociology and allied disciplines challenges the technocentric managerialism which dominates environmental policy its discourse and its impact The authors explore the relationship between social theory and sustainability in an attempt to transend technical rhetoric and embrace a broader understanding of nature

Social Theory and the Environment David S. Goldblatt, 1996-01-01 This work seeks to establish whether contemporary social theory can help us understand the structural origins of environmental degradation and environmental politics It gives a critical investigation of the work of Anthony Giddens Andre Gorz Jurgen Habermas and Ulrich Beck

the loss of biodiversity complex socio environmental problems indicate the urgency for cross disciplinary research into the ways in which the social the natural and the technological are ever more entangled This ground breaking text moves between environmental sociology and environmental geography political and social ecology and critical design studies to provide a definitive mapping of the state of environmental social theory in the age of the anthropocene Environments Natures and Social Theory provokes dialogue and confrontation between critical political economists actor network theorists neo Malthusians and environmental justice advocates It maps out the new environmental politics of hybridity moving from hybrid neo liberals to end times ecologists from post environmentalists to cyborg eco socialists White Rudy and Gareau insist on the necessity of a critical but optimistic hybrid politics arguing that a more just egalitarian democratic and sustainable anthropocene is within our grasp This will only be brought into being however by reclaiming celebrating and channeling the reconstructive potential of entangled hybrid humans as inventive hominids creative gardeners critical publics and political agents Written in an accessible style Environments Natures and Social Theory is an essential resource for undergraduate and postgraduate students across the social sciences
