Society In Time And Space A Geographical Perspective On Change:

Society in Time and Space Robert A. Dodgshon, 1998-08-13 Table of Contents **Time, Space, and Society A.** Kellerman, 2012-12-06 Time and space are two of the most basic dimensions of human life They envelop all human beings from birth to death As such they provide the context for human existence At the same time however time and space also serve as major influencing factors in mankind's actions Hence a vast literature has developed on time and space as separate dimensions and recently on time space as joint dimensions Interestingly enough the social connotations of time and space have mostly been studied with the individual human being in mind The more societal significance of time and space whether separately or jointly have been relatively neglected It is the purpose of this volume to help fill this lacuna through discussions on some of the many junctions of time space and society at large The discussion will naturally involve concepts and findings from more than just one discipline notably geography sociology social history and political science It is thus obvious that the topic may be highlighted from several perspectives Given my own education and work the approach will lean more to the geographical perspective Geography has a special merit as an integrating framework for the study of time space and society It is a discipline that has space at the center of its raison d'être and as such has always striven for integration holism and comprehensiveness *The City and the Railway in the World from the Nineteenth Century to the Present* Ralf Roth, Paul Van Heesvelde, 2022-07-18 This volume explores the relationship between cities and railways over three centuries Despite their nearly 200 year existence *The City and the Railway in the World* shows that urban railways are still politically and historically important to the modern world Since its inception cities have played a significant role in the railway system cities were among the main reasons for building such efficient but lavish and costly modes of transport for persons goods and information They also influenced the technological appearance of railways as these have had to meet particular demands for transport in urban areas In 25 essays this volume demonstrates that the relationship between the city and the railway is one of the most publicly debated themes in the context of daily lives in growing urban settings as well as in the second urbanisation of the global South with migration from rural to urban landscapes The volume's broad geographical range includes discussions of railway networks railway stations and urban rails in countries such as India Japan England Belgium Romania Nigeria the USA and Mexico *The City and the Railway in the World* will be a useful tool for scholars interested in the history of transport travel and urban change *The Virtual Representation of the Past* Mark Greengrass, Lorna Hughes, 2017-05-15 This unique book critically evaluates the virtual representation of the past through digital media A distinguished team of leading experts in the field approach digital research in history and archaeology from contrasting viewpoints including philosophical methodological and technical They illustrate the challenges involved in representing the past digitally by focusing on specific cases of a particular historical period place or technical problem [GeoHumanities](#) Michael Dear, Jim Ketchum, Sarah Luria, Doug Richardson, 2011-04-14 In the past decade there has been a convergence of

transdisciplinary thought characterized by geography's engagement with the humanities and the humanities integration of place and the tools of geography into its studies GeoHumanities maps this emerging intellectual terrain with thirty cutting edge contributions from internationally renowned scholars architects artists activists and scientists This book explores the humanities rapidly expanding engagement with geography and the multi methodological inquiries that analyze the meanings of place and then reconstructs those meanings to provoke new knowledge as well as the possibility of altered political practices It is no coincidence that the geohumanities are forcefully emerging at a time of immense intellectual and social change This book focuses on a range of topics to address urgent contemporary imperatives such as the link between creativity and place altered practices of spatial literacy the increasing complexity of visual representation in art culture and science and the ubiquitous presence of geospatial technologies in the Information Age GeoHumanities is essential reading for students wishing to understand the intellectual trends and forces driving scholarship and research at the intersections of geography and the humanities disciplines These trends hold far reaching implications for future work in these disciplines and for understanding the changes gripping our societies and our globalizing world

The Spatial Turn Barney Warf, Santa Arias, 2008-09-18 Across the disciplines the study of space has undergone a profound and sustained transformation Space place mapping and geographical imaginations have become commonplace topics in a variety of analytical fields in part because globalization has accentuated the significance of location While this transformation has led to a renaissance in human geography it also has manifested itself in the humanities and other social sciences The purpose of this book is not to announce that space is significant which by now is well known but to explore how space is analyzed by a variety of disciplines to compare and contrast these approaches identify commonalities and explore how and why differences appear The volume includes works by 13 scholars from a variety of geographical regions and disciplines The chapters combine up to date literature reviews concerning the role of space in each discipline and several offer original empirical analyses Some chapters are concerned with Geography while others explore the role of space in contemporary Anthropology Sociology Religion Political Science Film and Cultural Studies The introduction surveys the development of the spatial turn across the fields under consideration Despite frequent reference to the spatial turn this is the first volume to explicitly address how theory and practice concerning space is used in a variety of fields from diverse conceptual perspectives This book will appeal to everyone conducting conceptual and theoretical research on space not simply in Geography but in related fields as well

Confounding Powers William J. Brenner, 2016-01-29 Nearly a decade and a half after 9 11 the study of international politics has yet to address some of the most pressing issues raised by the attacks most notably the relationships between Al Qaeda's international systemic origins and its international societal effects This theoretically broad ranging and empirically far reaching study addresses that question and others advancing the study of international politics into new historical settings while providing insights into pressing policy challenges Looking at actors that depart from established structural and

behavioral patterns provides opportunities to examine how those deviations help generate the norms and identities that constitute international society Systematic examination of the Assassins Mongols and Barbary powers provides historical comparison and context to our contemporary struggle while enriching and deepening our understanding of the systemic forces behind and societal effects of these confounding powers *Time-Space Compression* Barney Warf, 2008-03-03 If geography is the study of how human beings are stretched over the earth's surface a vital part of that process is how we know and feel about space and time Although space and time appear as natural and outside of society they are in fact social constructions every society develops different ways of measuring organizing and perceiving them Given steady increases in the volume and velocity of social transactions over space time and space have steadily shrunk via the process of time space compression By changing the time space prisms of daily life how people use their times and spaces the opportunities and constraints they face the meanings they attach to them time space compression is simultaneously cultural social political and psychological in nature This book explores how various social institutions and technologies historically generated enormous improvements in transportation and communications that produced transformative reductions in the time and cost of interactions among places creating ever changing geographies of centrality and peripherality Warf invokes a global perspective on early modern late modern and postmodern capitalism He makes use of data concerning travel times at various historical junctures maps of distances between places at different historical moments anecdotal analyses based on published accounts of people's sense of place examinations of cultural forms that represented space e.g. paintings and quotes about the culture of speed Warf shows how time space compression varies under different historical and geographical conditions indicating that it is not one single homogenous process but a complex contingent and contested one This book will be useful book for those studying and researching Geography History Sociology and Political Science as well as Anthropology and Philosophy **The Spatial Humanities** David J. Bodenhamer, John Corrigan, Trevor M. Harris, 2010 Applying the analytical tools of GIS to new fields of research **Landesque Capital** N Thomas Håkansson, Mats Widgren, 2014-03-31 This book is the first comprehensive global treatment of landesque capital a widespread concept used to understand anthropogenic landscapes that serve important economic social and ritual purposes Spanning the disciplines of anthropology human ecology geography archaeology and history chapters combine theoretical rigor with in depth empirical studies of major landscape modifications from ancient to contemporary times They assess not only degradation but also the social political and economic institutions and contexts that make sustainability possible Offering tightly edited original contributions from leading scholars this book will have a lasting influence on the study long term human environment relations in the human and natural sciences
